ONDAS

Chevron Places Order for American Robotics' Automated Drones

American Robotics builds its customer base in the oil and gas sector with new purchase order

WALTHAM, Mass.--(BUSINESS WIRE)-- Ondas Holdings Inc. (NASDAQ:ONDS), a leading provider of private wireless data, drone and automated data solutions through its wholly owned subsidiaries, Ondas Networks Inc. and American Robotics, Inc. ("American Robotics" or "AR"), announced today that [American Robotics](#) received a new purchase order from Chevron for its fully autonomous, FAA-approved, Scout Systems. This will be American Robotics' second Fortune 100 customer in the oil and gas space.

“The oil and gas industry is primed to benefit from recent advancements in autonomous drone technology,” said Reese Mozer, CEO and co-founder of American Robotics. “Prior to our game-changing FAA approvals, asset managers that used drones to monitor their oil and gas fields needed to employ pilots and visual observers to fly the systems manually, and then manually

convert the data into actionable insights. With Scout System, we are providing the oil and gas industry with a dramatically more efficient and effective way to manage, monitor, and inspect their assets. Analytics that were previously unattainable due to high costs of operation are now available through the Scout System, allowing users to make informed decisions in real-time that will drive their business forward.”

Working in and maintaining oil and gas infrastructure is time-consuming, labor-intensive, and can often put people in danger. Millions of acres of assets must be continually monitored to check for oil leaks, methane emissions, and damaged equipment. American Robotics' fully-

automated drone systems each conduct up to 20 autonomous missions per day without having a pilot or visual observer on the ground. The adoption of this technology in the space will allow for automated inspections, regular site monitoring, and enhanced safety for employees, all at a lower cost with increased accuracy.

The use of autonomous drones in the oil and gas industry is expected to continue and expand significantly in the coming years, as they are a crucial component when it comes to ensuring site safety and conducting regular facility inspections. Automating high-frequency inspections is critical for oil and gas companies to comply with global climate change mitigation commitments and regulations such as the U.S. Environmental Protection Agency's (EPA) new Clean Air Act rule, intended to reduce methane emissions by 30 percent by 2030. Overall, the industry is projected to spend [\\$15.6 billion](#) on digital transformations by the end of the decade.

About Ondas Holdings Inc.

Ondas Holdings Inc. ("Ondas") is a leading provider of private wireless data and drone solutions through its wholly owned subsidiaries Ondas Networks Inc. ("Ondas Networks") and American Robotics, Inc. ("American Robotics" or "AR"). Ondas Networks is a developer of proprietary, software-based wireless broadband technology for large established and emerging industrial markets. Ondas Networks' standards-based (802.16s), multi-patented, software-defined radio FullMAX platform enables Mission-Critical IoT (MC-IoT) applications by overcoming the bandwidth limitations of today's legacy private licensed wireless networks. Ondas Networks' customer end markets include railroads, utilities, oil and gas, transportation, aviation (including drone operators) and government entities whose demands span a wide range of mission critical applications. American Robotics designs, develops, and markets industrial drone solutions for rugged, real-world environments. AR's Scout System™ is a highly automated, AI-powered drone system capable of continuous, remote operation and is marketed as a "drone-in-a-box" turnkey data solution service under a Robot-as-a-Service (RAAS) business model. The Scout System™ is the first drone system approved by the FAA for automated operation beyond-visual-line-of-sight (BVLOS) without a human operator on-site. Ondas Networks and American Robotics together provide users in rail, agriculture, utilities and critical infrastructure markets with improved connectivity and data collection capabilities.
