BRUNSWICK™

Series 5 Fliteboard Jet Introduced by Mercury/Brunswick

MIAMI – [Fliteboard](#), a brand of Brunswick Corporation (NYSE: BC), introduced the Series 5 Fliteboard at the Miami International Boat Show. The new range brings upgraded features and performance to every model in the Fliteboard ecosystem and incorporates Flite Jet 2. This all-new jet system has been developed in collaboration with Mercury Marine and offers riders an unprecedented smoother, quieter, and safer ride.

Thanks to its clever engineering and hydrodynamic efficiency the advanced jet offers enhanced safety, stability and take-off power, for all skill levels. It is our premium propulsion option for powered eFoil riding perfection in flat water or surf and compatible with Flite's high-performance Conical Wing range, including those from FLITELab*.

"We are launching the Series 5 Fliteboard with a groundbreaking jet design," said Nick Stickler, Fliteboard's President. "Flite has been dedicated to transforming the world of water sports, and with Flite Jet 2, we are setting new benchmarks. Series 5 is crafted with every rider in mind, delivering an experience that enhances the thrill for enthusiasts of all skill levels."

"Mercury's technical collaboration with Flite has been a perfect fit," said John Scherer, Brunswick technical fellow specializing in hydrodynamics and propulsion. "Mercury was able to contribute industry-leading propulsion system design and analysis along with materials and manufacturing methods to enhance Flite's deep knowledge of their product and market, resulting in the completely re-invented, customer-focused Flite Jet 2."

Series 5 Flite Jet 2 is designed as the ultimate upgrade to any board. Offering more simplicity across the range it is compatible with models such as Flitescooter, Flite AIR, Fliteboard, PRO, and ULTRA L2. Initial testing indicates it is the world's most efficient eFoil jet, comparable to our prop guard, resulting in significantly longer ride times than the original Flite Jet which makes it suitable for Flitecell Sport and Nano for advanced riders. The launch includes a limited-edition Clay color for the Series 5 Fliteboard and PRO models.

Pricing ranges from \$7,395 to \$18,995 USD, available starting February 12, 2025. For more information, visit fliteboard.com.
