

ShotSpotter's Gunshot Detection Technology Unanimously Passes Oakland's Rigorous Surveillance Ordinance

City's New Ordinance Sets High Bar for Law Enforcement Technology to Protect Individual Privacy Rights

NEWARK, Calif., Dec. 02, 2019 (GLOBE NEWSWIRE) -- [ShotSpotter, Inc.](#) (Nasdaq: SSTI), the leader in solutions that help law enforcement officials identify, locate and deter gun violence, today announced it has received unanimous [approval](#) for continued use of its gunshot detection technology by the City Council of Oakland and its Privacy Advisory Commission (PAC) after a rigorous review. The review was required under a 2018 ordinance that Oakland established in conjunction with the ACLU related to the acquisition and use of surveillance technology. Oakland's ordinance is considered the strongest municipal surveillance oversight in the United States¹. Earlier this year, the city banned the use of facial recognition technology.

Oakland's PAC, composed of commissioners from each city council district, acts as a privacy check on the city when any municipal entity wants to acquire or continue using an existing technology that may impact individual privacy rights. After a six-month review, the commission unanimously approved the continued use of ShotSpotter's gunshot detection technology. Oakland has been a ShotSpotter customer for more than 10 years.

"The Privacy Advisory Commission is here to protect the interests of Oakland's citizens as technology continues to expand into more areas of people's lives," said Brian Hofer, Chair of Oakland's Privacy Advisory Commission. "ShotSpotter has proven to be a thoughtful and transparent leader that does what it takes to mitigate privacy concerns. We recognize ShotSpotter as an important tool for public safety and determined that its benefits outweigh the very minimal risks to individual privacy."

"We strive to find the right balance between addressing potential privacy concerns and ensuring the operational effectiveness of our products to deliver public safety benefits," said ShotSpotter President and CEO, Ralph A. Clark. "Securing unanimous approval from Oakland's City Council and Privacy Advisory Commission validates the path we are on to best serve the community's needs."

Earlier this year, the non-profit Policing Project at the New York University School of Law conducted an independent privacy [audit](#) of ShotSpotter's gunshot detection technology. The organization had full access to ShotSpotter technology and personnel as well as full editorial control of the report. The report concluded that ShotSpotter was "an extremely low risk for voice surveillance." The Policing Project also recommended several modifications to further

strengthen ShotSpotter's privacy protections and all the recommendations were adopted.

About ShotSpotter Inc.

ShotSpotter (NASDAQ: SSTI) provides precision-policing solutions for law enforcement to help deter gun violence and make cities, campuses and facilities safer. The company's flagship product, ShotSpotter® Flex™, is the leading gunshot detection, location and forensic analysis system, and is trusted by 100 cities.
