# Oncolytics Biotech® Announces Poster Presentation at the 2018 Gastrointestinal Cancers Symposium Sponsored by ASCO in Patients with Relapsed Metastatic Adenocarcinoma of the Pancreas

CALGARY and SAN DIEGO, CA, Dec. 27, 2017 /PRNewswire/ - Oncolytics Biotech® Inc. (TSX: ONC) (OTCQX: ONCYF) (Oncolytics or the Company), a biotech company developing REOLYSIN®, also known as pelareorep, an intravenously delivered immuno-oncolytic virus that activates the innate and adaptive immune systems to turn 'cold' tumors 'hot', today announced that data from REO 024 will be presented at the 2018 Gastrointestinal Cancers Symposium sponsored by ASCO, January 18 – 20, 2018, in San Francisco. The poster presentation by Dr. Devalingam Mahalingam, M.D. Ph.D., Associate Professor of Medicine (Hematology and Oncology) at the Feinberg School of Medicine, Northwestern University, will present clinical data evaluating intravenous administration of pelareorep in combination with pembrolizumab (KEYTRUDA®) and chemotherapy in patients with advanced or metastatic pancreatic adenocarcinoma.

"I'm thrilled that Dr. Mahalingam will have the opportunity to present data from the REO 024 study combining pelareorep with Merck's Keytruda and chemotherapy," said Dr. Matt Coffey, President and CEO of Oncolytics Biotech. "While our focus remains on metastatic breast cancer, we continue to be very interested in the potential to treat pancreatic cancer patients. Our NCI-8601 study demonstrated an increase in landmark survival at two years in pancreatic patients from nine percent to twenty percent, when comparing pelareorep plus carboplatin to carboplatin alone. Our REO 017 study improved overall two-year survival in pancreatic patients from historical measures of four to five percent to twenty-four percent, when comparing pelareorep plus gemcitabine to gemcitabine alone. We believe there is an obvious therapeutic effect in pancreatic cancer and look forward to this presentation in January."

**Abstract number:** 283

**Title:** *A study of pelareorep in combination with pembrolizumab and chemotherapy in patients (pts) with relapsed metastatic adenocarcinoma of the pancreas (MAP)*

**Poster Session:** Session B: Cancers of the Pancreas, Small Bowel, and Hepatobiliary Tract

**Date/Time:** January 19, 11:30 AM-1:00 PM; 5:30 PM-6:30

## About REOLYSIN/Pelareorep

REOLYSIN, also known as pelareorep, is a non-pathogenic, proprietary isolate of the unmodified reovirus: a first-in-class intravenously delivered immuno-oncolytic virus for the treatment of solid tumors and hematological malignancies. The compound induces selective tumor lysis and promotes an inflamed tumor phenotype through innate and adaptive immune responses to treat a variety of cancers.

## About Oncolytics Biotech Inc.

Oncolytics is a biotechnology company developing REOLYSIN, also known as pelareorep, an intravenously delivered immuno-oncolytic virus. The compound induces selective tumor lysis and promotes an inflamed tumor phenotype – turning 'cold' tumors 'hot' – through innate and adaptive immune responses to treat a variety of cancers. Oncolytics' clinical development program emphasizes three pillars: chemotherapy combinations to trigger selective tumor lysis; immuno-therapy combinations to produce adaptive immune responses; and immune modulator (IMiD) combinations to facilitate innate immune responses. Oncolytics is currently planning its first registration study in metastatic breast cancer, as well as studies in combination with checkpoint inhibitors and targeted and IMiD therapies in solid and hematological malignancies.
