Airgain AC-Fleet 5G Vehicle Gateway for First Responders

AC-Fleet is the most compact “all-in-one” 5G vehicle gateway on the market, combining a 5G modem, router, Wi-Fi 6, GPS, Gigabit Ethernet, and high-performance embedded antennas into a rugged, low-profile, housing.

AC-Fleet provides secure, high-speed connectivity for

mission-critical fleets, including law enforcement, fire, EMS, and extended primary customers (public works, utilities, hospitals, transportation, schools and other essential services).

“The FirstNet Trusted™ designation reinforces AC-Fleet’s value as a mission-critical communications platform,” said Brian Makarowski, Vice President of Product Management and Marketing at Airgain.

“As the most compact all-in-one 5G gateway available, AC-Fleet improves vehicle connectivity, simplifies installation and maintenance, and performs reliably in extreme temperatures, vibration, and wet environments. It also lowers the total cost of ownership compared to traditional solutions with trunk-mounted routers and separate roof-mounted antennas. AC-Fleet is purpose-built for first responders who depend on always-on, high-performance communications.”

The FirstNet Trusted™ certification highlights Airgain's continued strategic investment in public safety technology. As a second-generation solution building on Airgain's earlier deployments, AC-Fleet reinforces the company's ongoing collaboration with AT&T and strengthens its ability to support a growing network of public safety and critical infrastructure customers.

FirstNet Trusted™ devices have met the standards for supporting the critical operational needs of public safety agencies and users who need tools that are highly secure, resilient, scalable, and available when needed. AC-Fleet is optimized to operate on FirstNet's dedicated Band 14 spectrum as well as AT&T's commercial LTE and 5G bands—ensuring priority and preemption are available to first responders when it matters most.

FirstNet is the only nationwide wireless communications platform dedicated to first responders and those who support them. Designed with and for public safety, FirstNet provides reliable, secure, and prioritized connectivity—even when commercial networks are congested.

With features like always-on priority and preemption and access to Band 14 spectrum, FirstNet helps ensure that first responders can communicate, share data, and coordinate effectively during emergencies, large-scale events, and daily operations.

With multi-carrier eSIM support, IP67/IP69K ruggedization, and both cloud and local management options, AC-Fleet is ready for rapid deployment across a wide range of fleet vehicles. Its streamlined design also lowers total cost of ownership by reducing the need for external antennas, RF cables, and mounting components.

AirgainConnect® AC-Fleet™ is available now for immediate delivery across the United States.
