UiPath Powers End-to-End Automation of Mission Critical Business Processes Built on Oracle

Technology alliance enables customers to accelerate digital transformation, simplify automation of critical business processes supported by Oracle applications, on premise and in the cloud

NEW YORK--(BUSINESS WIRE)-- UiPath, a leading enterprise [Robotic Process Automation](#) ([RPA](#)) software company, and a member of the Oracle PartnerNetwork (OPN), today announced a strategic technology collaboration with Oracle that combines powerful RPA with [Oracle Cloud](#) Infrastructure and business applications. This collaboration enables customers to streamline critical workflows and complex processes and to focus on strategic tasks that require a human touch. By driving productivity and accelerating digital transformation, customers can now use end-to-end automations that eliminate manual errors and reduce operational costs.

Automation is helping organizations around the world become faster and more agile in the face of increased demand and rapidly changing environments. The UiPath Platform fuels the 'automation first' era, removing mundane work so users can focus on what matters most. Now customers can increase productivity, accelerate digital transformation, and scale their businesses by simplifying the automation of critical business processes supported by Oracle applications, on premise and in the cloud. Specifically, this collaboration helps customers improve productivity and get faster results at scale:

- **Easily deploy and manage UiPath RPA on Oracle Cloud Infrastructure:** UiPath Robot + Studio is now available in the [Oracle Cloud Marketplace](#). Now UiPath customers can click-to-deploy UiPath robots in minutes to automate intensive, time-consuming work such as virtual machines configuration. This decreases disruptions for users and allows customers to effortlessly and quickly scale their digital workforce to adjust for shifting workloads, increasing productivity at a moment's notice.

- **Deploy best-in-class automation for Oracle Applications:** Easy-to-use, drag-and-drop activities allow customers to quickly automate business processes without customization or disruption of their IT infrastructure. UiPath automates complex, end-to-end processes that involve Oracle on premise applications, including Siebel CRM, PeopleSoft, E-Business Suite, JD Edwards EnterpriseOne, as well as Oracle cloud applications, including Oracle NetSuite, Oracle ERP Cloud, Oracle HCM Cloud, and Oracle CX Cloud.

  As the COVID-19 pandemic continues, organizations and healthcare institutions around the world are facing extreme challenges. For example, a Fortune 500 clinical

laboratory recently had an influx of personnel changes related to COVID-19. This has triggered an increase in dependent verification checks to ensure benefit coverage. To help manage the backlog of verifications that has been steadily growing, the organization is automating these checks with UiPath within Oracle HCM Cloud.

- **Empower end-to-end automation leveraging Oracle Integration Cloud – and skip the APIs:** Customers can experience faster time-to-value and reduce development times with out-of-the-box, low-code integration capabilities. UiPath delivers a streamlined integration with Oracle Integration Cloud, so customers do not have to build integrations from scratch and can deploy automations faster across Oracle applications as well as external systems or third-party apps. This accelerates digital transformation journeys and increases productivity by extending the reach of RPA.

The Oracle Cloud Marketplace is a one-stop shop for Oracle customers seeking trusted business applications offering unique business solutions, including ones that extend Oracle Fusion Applications. Oracle Cloud is a Generation 2 enterprise cloud that delivers massive, non-variable performance and next-generation security across a comprehensive portfolio of services including SaaS, application development, application hosting, and business analytics. Customers get access to leading compute, storage, data management, integration, security, HPC, artificial intelligence (AI), and Blockchain services to augment and modernize their critical workloads. Oracle Cloud runs Oracle Autonomous Database, the industry's first and only self-driving database.

"Now more than ever organizations across all industries are looking for ways to increase operational agility and seamlessly execute on business processes to drive business and digital transformation," said David Hicks, vice president, Worldwide ISV Cloud Business Development, Oracle. "In combination with the UiPath platform, our customers can leverage the strength of RPA and artificial intelligence to automate complex tasks and further streamline their core business processes, and get back to the work that needs a human touch."

"In today's environment, organizations need to be able to quickly pivot and respond to challenges from spikes in demand to workforce productivity," said Dhruv Asher, UiPath Senior Vice President of Alliances and Business Development. "When they rely solely on existing systems to support core business processes, it prevents them from operating at full capacity. Yet, updating those complex systems to accelerate workflows, remove bottlenecks, and drive productivity can be a significant undertaking. Our collaboration with Oracle resolves that by infusing both Oracle applications and non-API-based applications with powerful and sophisticated automations that streamline critical workflows. This means customers can automate repetitive, time-consuming tasks to deliver a scalable digital workforce that can keep up with the speed of business."

About UiPath

UiPath is leading the 'automation first' era – championing a robot for every person and enabling robots to learn new skills through AI and machine learning. Through free and open training, UiPath is led by a commitment to bring digital era skills to millions of people around the world, thereby improving business productivity and efficiency, employee engagement and customer experience.

The company's hyperautomation platform combines the #1 Robotic Process Automation (RPA) solution with a full suite of capabilities that enable every organization to scale digital business operations at unprecedented speed. The company has already automated millions of repetitive, mind-numbing tasks for businesses and government organizations all over the world including approximately 50% of the Fortune 500.

UiPath was recently recognized as the top company on Deloitte's 2019 Technology Fast 500, a ranking of the fastest public and private technology companies in North America, and #3 on the 2019 Forbes Cloud 100.

About Oracle PartnerNetwork

Oracle PartnerNetwork (OPN) is Oracle's partner program designed to enable partners to accelerate the transition to cloud and drive superior customer business outcomes. The OPN program allows partners to engage with Oracle through track(s) aligned to how they go to market: Cloud Build for partners that provide products or services built on or integrated with Oracle Cloud; Cloud Sell for partners that resell Oracle Cloud technology; Cloud Service for partners that implement, deploy and manage Oracle Cloud Services; and License & Hardware for partners that build, service or sell Oracle software licenses or hardware products. Customers can expedite their business objectives with OPN partners who have achieved Expertise in a product family or cloud service. To learn more visit: http://www.oracle.com/partnernetwork.
