UiPath Recognized as a Leader in the Gartner® Magic Quadrant™ for AI-Augmented Software Testing Tools

UiPath Test Cloud helps enterprises validate speed, identify bottlenecks and eliminate repetitive workflows to drive greater productivity

NEW YORK--(BUSINESS WIRE)-- UiPath (NYSE: PATH), a global leader in [agentic automation](#), today announced its recognition as a Leader in the Gartner® Magic Quadrant™ for AI-Augmented Software Testing Tools. A complimentary copy of this research report is available [here](#).

The addition of AI and agents to traditional software testing tools expands the reach, productivity, and capacity of testers, creating a quality assurance approach featuring AI-powered agents capable of acting as autonomous decision-makers to conduct tests, rather than relying on predetermined scripts. Agents can intelligently interact with an application, learn its behavior, and dynamically adapt testing strategies to identify and address issues, leading to faster, more resilient, and efficient testing and a reduced manual maintenance burden.

UiPath Test Cloud takes those capabilities further, making agentic testing available to quality assurance, engineering, and testing teams at every level throughout the organization, accelerating and scaling testing across every step of the software development cycle. UiPath Autopilot™ for Testers offers an out-of-the-box agent with a broad collection of built-in and customizable AI to accelerate the testing lifecycle, including agentic test design, agentic test automation, and agentic test management. And, for more advanced testing teams, UiPath Agent Builder in Studio is a toolkit for building custom AI agents for unique testing needs, giving teams flexibility to create exactly what they need, when they need it, according to their own specifications.

“We see agentic testing as a business accelerator and the next evolution in QA, where AI-powered agents work alongside humans to independently analyze, generate, execute, and refine tests across the entire lifecycle,” said Gerd Weishaar, General Manager and Senior Vice President of Product Management for Test Cloud. “We’re building on that vision with a large community of users and resources to help create, customize, and deploy AI agents using natural language prompts and integrated toolsets. Our UiPath Test Cloud lets testers accelerate and simplify their work, unlocking productivity at scale.”

According to Gartner, “The market for AI-augmented software testing tools reflects the rapid evolution of technologies for efficient generation, maintenance, tracking, versioning, selection and prioritization of test artifacts; running tests at scale in the cloud; and optimizing the overall test process. These tools are intended to be more than just a tool for authoring

and running tests; they are essential for businesses aiming to achieve excellence in software quality, productivity and market responsiveness.”

About UiPath

UiPath (NYSE: PATH) is a global leader in agentic automation, empowering enterprises to harness the full potential of AI agents to autonomously execute and optimize complex business processes. The UiPath Platform™ uniquely combines controlled agency, developer flexibility, and seamless integration to help organizations scale agentic automation safely and confidently. Committed to security, governance, and interoperability, UiPath supports enterprises as they transition into a future where automation delivers on the full potential of AI to transform industries.
