Huntsman Implements Mass Balance Concept at Switzerland Site

Monthey Production Site and Selected Products Receive REDcert² Certification

Huntsman Corporation (NYSE:HUN) announced its production site in Monthey, Switzerland has implemented a mass balance concept and achieved REDcert² certification. The certification covers the production of epoxy resins products used in a variety of consumer and industrial markets.

Mass balance refers to the mixing of fossil fuels and renewable or recycled raw materials into existing systems and production processes, while rigorously tracking their quantities and translating them into mass balance units, which are digitally attributed to specific products. A third party then certifies and confirms the recycled or renewable content of final products. Mass balance simultaneously empowers customers to reach their sustainability targets while reducing our own environmental footprint.

“We have chosen to implement the Mass Balance Concept to reduce the environmental impact of the products and solutions we provide to our customers,” said Philippe Christou, Head of Environmental & Technology Intelligence for Huntsman’s Advanced Materials division. “We assist our clients in achieving their goals through the option to intentionally select a product with a carbon footprint that is substantially lower than the average of the global market. This concept enables customers to save a significant proportion of CO₂ emissions without compromising on performance, while avoiding costly re-qualifications.”

The Monthey site is the first Huntsman production facility to receive REDcert² certification.

About Huntsman:

Huntsman Corporation is a publicly traded global manufacturer and marketer of differentiated and specialty chemicals with 2022 revenues of approximately \$8 billion from our continuing operations. Our chemical products number in the thousands and are sold worldwide to manufacturers serving a broad and diverse range of consumer and industrial end markets.
