Q&A

Basis of presentation

Fiscal Year vs. Calendar Year

- Financial measures in this presentation correspond to Marvell's fiscal calendar
- Marvell's fiscal year is the 52- or 53-week period ending on the Saturday closest to January 31
- As an example, FY26 refers to the period February 2, 2025 through January 31, 2026
- We may also refer to calendar years in presenting external market data

Revenue and addressable markets

- Marvell reports revenue disaggregated in two broad end markets:
Data Center and Communications and Other
- During this presentation, we also provide additional information on revenue and addressable market trends by three businesses within Data Center:
Interconnect, Switch and Storage, and Custom

Forward-looking statements

Except for statements of historical fact, this presentation contains forward-looking statements (within the meaning of the federal securities laws) including, but not limited to, statements related to market trends and to the company's business and operations, business opportunities, growth strategy and expectations, and financial targets and plans, that involve risks and uncertainties. Words such as "anticipates," "expects," "intends," "plans," "projects," "believes," "seeks," "estimates," "can," "may," "will," "would" and similar expressions identify such forward-looking statements. These statements are not guarantees of results and should not be considered as an indication of future activity or future performance. Actual events or results may differ materially from those described in this presentation due to a number of risks and uncertainties.

For factors that could cause Marvell's results to vary from expectations, please see the risk factors identified in Marvell's Quarterly Report on Form 10-Q for the fiscal quarter ended August 1, 2026, as filed with the SEC on August 28, 2026, and other factors detailed from time to time in Marvell's filings with the SEC. The forward-looking statements in this presentation speak only as of the date of this presentation and Marvell undertakes no obligation to revise or update publicly any forward-looking statements.

Non-GAAP financial measures

- During this presentation, we will refer to certain financial measures on a U.S. Non-GAAP basis.
- We believe that the presentation of Non-GAAP financial measures provides important supplemental information to management and investors regarding financial and business trends relating to our financial condition and results of operations.
- While we use Non-GAAP financial measures as a tool to enhance our understanding of certain aspects of our financial performance, we do not consider these measures to be a substitute for, or superior to, the information provided by GAAP financial measures.
- Where Non-GAAP financial measures are presented, the most directly comparable financial measure calculated in accordance with GAAP and a reconciliation of the Non-GAAP financial measure to such GAAP measure are included in the Appendix to this presentation.

Matt Murphy

Chairman and CEO

Market forces

Explosion of data and bandwidth demand

Compute is moving to the data

End-to-end security required

Need for power efficiency

MARVELL®

MARVELL®

Mission

We develop and deliver semiconductor solutions that **move, store, process** and **secure** the world's data faster and more reliably than anyone else.

Architecting the Marvell platform

~\$20B in acquisitions

~\$20B in subsequent investment

~\$40B

of investment in building and scaling the platform

Subsequent investment = Non-GAAP operating expenses + stock-based compensation from FY17 to FQ2'27

AI workloads are reshaping the network

Moving data efficiently is becoming a fundamental constraint on
AI system performance

Hyperscalers rearchitecting their networks

AWS

"The way networks had been built wasn't going to scale into the future and that something fundamentally different had to happen."

May 2026

Google Cloud

"In the era of reasoning models and MoE, where any chip may need to talk to any other chip to route a token, this hop count matters."

April 2026

Meta

"Whether these clusters are training the next frontier model or serving inference at global scale, the network is in the critical path."

August 2026

Microsoft

"As we enter the era of frontier-scale intelligence, the economics of AI are increasingly determined not by peak compute performance but by how efficiently the system moves data."

August 2026

Customer deployment at scale | Comprehensive switch portfolio extending to 200T, 400T, and UAL

The industry's only portfolio of all switch protocols

Logical layer: Protocol

Marvell: One partner across every protocol

Marvell connects AI infrastructure across every distance

AI workloads drive new infrastructure demands

Explosion of technology needs: Compute | Memory | Scale-up networking | Connectivity reach

Reasoning at scale creates a memory challenge

Memory scaling beyond the server and rack

Memory architectures scale with inference demand

XPU / server

Direct-attach memory (SRAM / HBM)

Fastest access

Capacity constrained within
package and server

Rack

Memory-semantic network

More capacity

Scale-up network expands
memory capacity

Pod / multi-rack

Larger scale-up domains

Pod-scale access

Memory capacity expands
across multiple racks

**Scaling memory beyond the server requires a high-bandwidth,
low-latency scale-up network**

Scaling beyond the rack requires optics

Beyond the XPU package and the server

Inference-time compute / reasoning models
require access to more memory

Memory can only
scale if the network
scales with it

Copper → Reach limit → **Optical**

Beyond the rack

The network must extend beyond
the rack to access more memory

Higher
bandwidth

Lower
latency

Longer reach
and lower power

**Multi-rack scale-up networks require advanced optics
and high-radix, single-hop switching**

Scale-up requirements drive optics closer to compute

XPU 1 accesses memory in XPU 2 through the scale-up network

Scale-up network requirements

10x bandwidth density

Supporting HBM bandwidth

Low latency

Approach HBM load latency

Low power

Minimize data movement power

Reach

Extend across multiple racks

Traditional pluggables cannot efficiently support scale-up bandwidth density, latency and power

Pluggable

Front-panel optics

NPO

Optics adjacent to the package

Connectivity IP is the catalyst for the next generation of XPU's

Custom opportunity expanding rapidly

Standard product IP leadership enabling semi-custom opportunities

AI workloads outgrow off-the-shelf NICs

Traditional data center

- Foundational NICs are prevalent
- SmartNICs with integrated CPUs
- I/O speed < 100G

Marvell® OCTEON®
SmartNICs

AI challenges

- Specific I/O speed, BW and config
- Optimized data path, accelerators
- Custom network protocols
- Optimized integrated CPU

Marvell

Marvell® Custom NIC

NIC complexity increasing due to higher performance CPUs and XPU

Memory expansion and near-memory compute

Traditional data center

- CPU-bound workloads
- Direct-attach memory sufficient
- Marvell early standard CXL effort

AI challenges

- Inference and KV cache workloads
- Memory-bound, latency-sensitive
- CPU and XPU capacity and BW
- Memory shortage

Marvell

Marvell® Structera™

Custom

Memory expansion extending beyond CPUs to XPU

AI storage demands semi-custom silicon

Traditional data center

- Merchant controllers for SSDs
- Merchant accelerators for offload

Marvell® Bravera™
SSD controllers

AI challenges

- Multi-gen FW / SW control and multi-vendor NAND flexibility
- Storage offload performance required for AI responsiveness

Marvell

- Flash-agnostic storage controllers
- AI-optimized storage accelerators

Storage capacity and offload requirements are rising rapidly

A **new** class of AI infrastructure management silicon

Traditional data center

- BMC manages standard servers
- ~150 sensors, 100s KB/day
- Minimal processor and I/O perf

AI challenges

- Extremely complex AI servers
- >1500 sensors, 100s MB/day
- ~1000X more performance

Marvell

AI infrastructure
management

AI system management needs high-performance multi-core processors

Inference offload opens a **new** XPU attach market

Next-gen AI challenges

- Inference architectures evolving
- Need to offload XPU's for inference
- Specialized co-processors attached to XPU's

Marvell

Well-positioned to win in exciting new XPU attach market

Significant custom opportunity

Building a balanced portfolio

XPU and XPU attach driving growth

Adding XPU attach
to growing XPU business
for greater diversity

Reconciliations from GAAP to Non-GAAP

Discussion of Non-GAAP financial measures

Non-GAAP financial measures exclude the effect of stock-based compensation expense, amortization of acquired intangible assets, acquisition and divestiture related costs, restructuring and other related charges (gains), (including, but not limited to, changes in contractual obligations, employee severance costs, and facility exit related charges), change in fair value of contingent consideration liability and forward stock purchase contract, resolution of legal matters, and certain expenses and benefits that are driven primarily by discrete events that management does not consider to be directly related to Marvell's core business. Although Marvell excludes the amortization of all acquired intangible assets from these Non-GAAP financial measures, management believes that it is important for investors to understand that such intangible assets were recorded as part of purchase price accounting arising from acquisitions, and that such amortization of intangible assets that relate to past acquisitions will recur in future periods until such intangible assets have been fully amortized. Investors should note that the use of intangible assets contributed to Marvell's revenues earned during the periods presented and are expected to contribute to Marvell's future period revenues as well.

Marvell uses a Non-GAAP tax rate to compute the Non-GAAP tax provision. This Non-GAAP tax rate is based on Marvell's estimated annual GAAP income tax forecast, adjusted to account for items excluded from Marvell's Non-GAAP income, as well as the effects of significant non-recurring and period specific tax items which vary in size and frequency, and excludes tax deductions and benefits from acquired tax loss and credit carryforwards and changes in valuation allowance on acquired deferred tax assets. Marvell's Non-GAAP tax rate is determined on an annual basis and may be adjusted during the year to take into account events that may materially affect the Non-GAAP tax rate such as tax law changes; acquisitions; significant changes in Marvell's geographic mix of revenue and expenses; or changes to Marvell's corporate structure. For the second quarter of fiscal 2027, a Non-GAAP tax rate of 11.0% has been applied to the Non-GAAP financial results.

Marvell believes that the presentation of Non-GAAP financial measures provides important supplemental information to management and investors regarding financial and business trends relating to Marvell's financial condition and results of operations. While Marvell uses Non-GAAP financial measures as a tool to enhance its understanding of certain aspects of its financial performance, Marvell does not consider these measures to be a substitute for, or superior to, financial measures calculated in accordance with GAAP. Consistent with this approach, Marvell believes that disclosing Non-GAAP financial measures to the readers of its financial statements provides such readers with useful supplemental data that, while not a substitute for GAAP financial measures, allows for greater transparency in the review of its financial and operational performance.

Externally, management believes that investors may find Marvell's Non-GAAP financial measures useful in their assessment of Marvell's operating performance and the valuation of Marvell. Internally, Marvell's Non-GAAP financial measures are used in the following areas:

- Management's evaluation of Marvell's operating performance;
- Management's establishment of internal operating budgets;
- Management's performance comparisons with internal forecasts and targeted business models; and
- Management's determination of the achievement and measurement of certain types of compensation including Marvell's annual incentive plan and certain performance-based equity awards (adjustments may vary from award to award).

Non-GAAP financial measures have limitations in that they do not reflect all of the costs associated with the operations of Marvell's business as determined in accordance with GAAP. As a result, you should not consider these measures in isolation or as a substitute for analysis of Marvell's results as reported under GAAP. The exclusion of the above items from our GAAP financial metrics does not necessarily mean that these costs are unusual or infrequent.

Marvell does not provide a reconciliation of its forward-looking Non-GAAP measures to the most directly comparable GAAP measures for periods after the third quarter of fiscal 2027 because certain items that impact those GAAP measures are uncertain, depend on various factors, could be material to Marvell's results computed in accordance with GAAP, and cannot be provided without unreasonable effort. These items include, but are not limited to, restructuring and other related charges, asset impairments, stock-based compensation expense and other nonrecurring expenses that cannot reasonably be estimated in advance.

Appendices

Reconciliation of GAAP gross profit to Non-GAAP gross profit

(Millions) (Unaudited)	Q2'26	Q1'27	Q2'27
GAAP gross profit	\$ 1,010.6	\$ 1,260.8	\$ 1,455.6
