UiPath Positioned as a Leader in the Gartner Inaugural Magic Quadrant for Intelligent Document Processing

Key capabilities for data and information extraction help enterprises unlock value from their documents in the age of AI and agentic automation

NEW YORK--(BUSINESS WIRE)-- UiPath (NYSE: PATH), a global leader in [agentic automation](#), today announced its positioning as a Leader in the inaugural Gartner® Magic Quadrant™ for Intelligent Document Processing (IDP). A complimentary copy of this research report is available [here](#).

Realizing the benefits of agentic transformations relies on access to the wealth of data and information within processes, workflows, and the overall organization. Most solutions on the market are focused only on structured documents, organized in simple rows and columns. But enterprises struggle to contend with volumes of far more complex content; unstructured data and information, living in undefined formats and complex documents (contracts, blog posts, multimedia content, etc.). Access to that data is critical, but extracting and acting on it is a challenge, which is where IDP delivers substantial value, providing access to both structured and unstructured information and data.

UiPath's IDP takes these capabilities a step further with UiPath IXP, which uses the latest generative AI models to turn even the most complex unstructured documents and an expanding library of diverse content types into clean, structured data. With a large community of users and resources and a global technology and business ecosystem, UiPath IXP is built for fast time to value and a seamless user experience. It takes the pain out of complex document processing of all types, extending agentic automation into new use cases and workflows, unlocking the deep insights and value promised by AI and agentic automation.

"If you want to apply agentic automation to any document-based process, intelligent document processing is the missing piece to unlock accurate automation and impactful decision making," said Mark Geene, Senior Vice President of AI Products and Solutions, UiPath. "This is the foundation of our UiPath IXP – take the pain out of complex document processing to help our customers gain access to their structured and unstructured document data. Incorporating flexible AI with enterprise-grade validation, control and integration, we're helping our customers to extract value accurately, reliably, and compliantly from their documents."

According to Gartner, "A Leader must have a market-leading vision and the ability to deliver on that vision. Leaders have an insightful understanding of the IDP market, a reliable track record, the power to influence the market's direction, and an ability to attract and retain

customers. In the IDP market, Leaders demonstrate understanding of enterprise customers' needs and of opportunities to expand functionality and add new modules and services to their core IDP offerings."
