**Non-GAAP Financial Measure — Adjusted Net Investment Income:** Adjusted net investment income represents net investment income, excluding the capital gains-based incentive fee. The Company uses this non-GAAP financial measure internally in analyzing financial results and believes that this non-GAAP financial measure is useful to investors as an additional tool to evaluate ongoing results and trends for the Company. The Company's investment advisory agreement provides that a capital gains-based incentive fee is determined and paid annually with respect to realized capital gains (but not unrealized capital gains) to the extent such realized capital gains exceed realized losses and unrealized depreciation on investments for such year. However, under U.S. GAAP, a capital gains-based incentive fee is accrued if realized capital gains and unrealized appreciation of investments exceed realized capital losses and unrealized depreciation of investments. The Company believes that Adjusted net investment income is a useful indicator of operations exclusive of any capital gains-based incentive fee as net investment income does not include realized or unrealized investment activity associated with the capital gains-based incentive fee.
