

# UiPath Simplifies Agentic Automation with Voice Agents with Google's Gemini Models

NEW YORK--(BUSINESS WIRE)-- UiPath (NYSE: PATH), a global leader in [agentic automation](#), announced today the launch of the UiPath Conversational Agent with voice interaction enabled by Google's Gemini models. UiPath customers can now build agentic automation into business processes quickly and seamlessly without the need for complex coding and manual effort.

Text-based interactions with [AI agents](#) work well for tasks that demand precision, such as analyzing complex datasets, refining documents, or drafting formal communications—but can be challenging when applied to spontaneous conversations or real-world, dynamic interactions. Voice interactions provide contextual cues, subtle communication nuances, and collaborative problem-solving capabilities that text-based exchanges cannot deliver. AI agents can leverage voice communication to enhance their effectiveness in handling unpredictable and open-ended tasks. As AI agents become more prevalent, voice interaction will emerge as a natural communication method.

Leveraging Google Cloud's Vertex AI platform, UiPath enables customers to trigger, build, and manage automation through natural language speech—with the same contextual awareness and enterprise-grade execution as a developer writing code or a process owner building [automated workflows](#). The conversational agent has high automatic speech recognition (ASR) accuracy rates, multilingual support, reliable function calling for appropriate tool selection, and low latencies for real-time processing. It also enables advanced features like affective (emotion-aware) dialogue and proactive audio (where the model can decide to ignore or respond to certain inputs), elevating the capabilities of AI agents to interact with participants in natural voice.

"Voice is the most natural way we communicate, and now it can be the most natural way to automate," said Graham Sheldon, Chief Product Officer at UiPath. "By bringing Google Cloud's Vertex AI and Gemini models into the UiPath Platform, customers can trigger and orchestrate automations through real-time speech—making [agentic AI](#) more intuitive, more accessible, and more impactful in the flow of everyday work."

"The first wave of generative AI focused on individual productivity; the next is about transforming core business processes," said Michael Gerstenhaber, VP of Product Management for Vertex AI, Google Cloud. "On Google Cloud's Vertex AI, partners like UiPath are at the forefront of this shift, using our Gemini models to build agents that translate human language directly into complex, automated workflows."

*UiPath partnership with Google Cloud*

UiPath is [available](#) on Google Cloud Marketplace, enabling Google Cloud customers to purchase the industry-leading UiPath Platform™ and reliably deploy and scale their automation initiatives on Google Cloud infrastructure. Today, customers can deploy UiPath Studio and UiPath automations on Google Cloud in minutes. UiPath also recently expanded its partnership with Google Cloud to help customers facilitate their AI-powered automation journey through Google Workspace business collaboration offerings.
