UiPath Accelerates AI Transformation with Expanded Capabilities for its UiPath Platform for Agentic Automation and Orchestration

Solutions accelerate ROI and time-to-value, simplifying deployment across all stages of agent-building, automation, orchestration, and workflow automation

NEW YORK--(BUSINESS WIRE)-- UiPath (NYSE: PATH), a global leader in agentic automation, today announced an expanded set of offerings for its UiPath Platform for agentic automation and orchestration. Available today, this combination of pre-built solutions, new capabilities for orchestrations, and supporting tools for building and testing agents and automations creates an ecosystem that enables organizations to deploy rapid agentic automation. All with built-in security and governance to accelerate their efforts to drive efficiency, reduce costs, and realize impact and ROI from AI transformation efforts.

As more organizations look to AI agents and automation to become more efficient, many still struggle to identify the right use cases and build agents to transform processes into repeatable and long-running automated workflows. Add to that the inherent challenges in connecting data across the many systems and apps behind those processes, and it's easy to see why these efforts are stalling out, delaying the progress, and eventual ROI, of those agentic-driven transformations.

With the launch of the UiPath Platform™ earlier this year, UiPath created a pathway for organizations to jumpstart agentic automation. Now UiPath is expanding its platform with a new suite of pre-built solutions; orchestration and process excellence capabilities; document processing, agent-building, and testing tools; and powerful governance and trust capabilities, helping enterprises to accelerate ROI realization of their agentic transformation efforts.

Orchestrating the Enterprise with UiPath Maestro
Integrated capabilities in UiPath Maestro deliver end-to-end orchestration, empowering business users in all industries to drive excellence across the enterprise. Maestro Case Management provides pre-built orchestration for cases in Claims, Loans, Disputes, and Investigations, enabling the seamless modeling, management, and optimization of the lifecycle of high-priority business cases. In addition, new Maestro Process Apps provide business users with real-time visibility and actionable insights into all their processes and cases to proactively improve operations.

Faster Time-to-Value with Purpose-built UiPath Solutions
Combining agents, workflow automation, and full orchestration, UiPath Solutions simplifies

the application of agentic automation to specific industries or targeted business workflows. UiPath Solutions available today include end-to-end processes in financial services, healthcare, customer service, and retail, alongside pre-built targeted business workflow automations such as financial crime compliance and know your customer. Enterprises can accelerate value realization of agentic transformation efforts, speeding time-to-value, particularly for large-scale, repeatable processes.

Studio - One Place for Easy Agent and Automation Development
Announcing UiPath Agents, offering new options for building and integrating agents across low-code, conversational, and pro-code development. With UiPath's AI Agent Builder, teams get a new visual canvas for easier debugging, automatic optimization to improve quality, and reusable templates that speed deployment into production. New Conversational Agents now extend into Teams, Slack, and Copilot, with added support for voice, desktop triggers, and human hand-offs to make interactions more natural and flexible. And, for developers, Coded Agents launch with MCP plug-in support to connect external services, a Labs Sandbox for safe experimentation, and Studio Web integration on the path toward a more unified runtime.

Additionally, UiPath is announcing UiPath Screenplay and API Workflows to facilitate simpler accessibility and accelerated building of automations using natural language and end-to-end API workflows. Blending UiPath's industry-leading RPA and API with large language models and large action models, these new tools lower the barriers and simplify development for every employee and every organization, reducing the time and cost of agent and automation building.

Access Data Easily and Securely Across the Enterprise
New UiPath IXP agentic document processing enhancements seamlessly and securely optimize data and document-driven workflow automations across the enterprise. Capabilities for advanced data extraction, validation, and agentic looping enabling the scaling of complex tables, pages, and fields. Meanwhile, features like Autopilot for schema creation, Extraction Agents, and Validation Agents reduce manual effort and deliver unmatched accuracy, with a proprietary and customizable LLM to drive last-mile performance. Purpose-built for high-value use cases such as contract comparison and system-of-record validation, these innovations integrate seamlessly with UiPath Agents and Agentic Solutions to accelerate time-to-value and optimize document workflows across industries.

Accelerate Testing, At Scale
Innovative UiPath Test Cloud features both accelerate and scale testing across every step of the software development cycle. Performance testing allows QA engineers to simulate real-world user traffic and workloads to assess how applications perform under stress, from identifying bottlenecks to ensuring system stability and validating speed and responsiveness to meet business and customer expectations at scale. In addition, Test Cloud now offers Studio Web for software testing, self-healing test automation, autonomous testing, and chatting with UiPath's AI-driven Autopilot in Test Manager, delivering a true end-to-end solution for agentic testing.

Enterprise-Class Governance and Trust
Powerful new AI security and compliance features are built in, giving organizations the confidence to deploy and manage agentic automation with control and enterprise-grade oversight and meet international standards at every stage. Expanded capabilities include extended agent guardrails for controlled agency and sensitive data use protection, coupled

with content moderation for real-time PII masking. UiPath's Unified Audit 2.0 platform offers a single source of truth to streamline compliance, accelerate investigations, and enforce accountability across all automation actors, enabling the integration of audit logs for automations, agents, and governance events into existing compliance and security workflows.

"Managing a portfolio of global workforce solutions clients along with thousands of partners in our supplier network presents unique challenges in our business, as everyone operates differently according to their industry, geography, and technology stack" - Paul Kistner, Global Head of Business Transformation, Allegis Global Solutions. "UiPath is more than a vendor—they are a true partner in co-innovation and transformation. With AI agents, robots, and humans working together, we are not just solving today's problems— we are reimagining how our business works and how our services will be delivered in the future. This is our foundation for a smarter, more strategic Allegis Global Solutions."

"AI adoption is on the rise, but tangible benefits are elusive due to lack of clear business ROI, disconnected processes, tools, data, and now also AI agent sprawl," said Graham Sheldon, Chief Product Officer, UiPath. "AI transformation leaders have told us they want more AI or more tools – they want one AI platform to manage it all. Our expanded platform gives them the ability to readily build agents, drive automation across their most common use cases, and orchestrate processes from end to end with the confidence of security and compliance at every step of their journey. We're meeting the demand of modern AI transformation, helping enterprises of all sizes and technical expertise achieve greater agility, responsiveness, and efficiency in their operations, and accelerating ROI from their agentic AI investment."

About UiPath
UiPath (NYSE: PATH) is a global leader in agentic automation, empowering enterprises to harness the full potential of AI agents to autonomously execute and optimize complex business processes. The UiPath Platform™ uniquely combines controlled agency, developer flexibility, and seamless integration to help organizations scale agentic automation safely and confidently. Committed to security, governance, and interoperability, UiPath supports enterprises as they transition into a future where automation delivers on the full potential of AI to transform industries.
