UiPath Named a Leader in Document Mining and Analytics Platforms by Independent Research Firm

NEW YORK--(BUSINESS WIRE)-- UiPath (NYSE: PATH), a global leader in business orchestration and automation, today announced it has been named a Leader in *The Forrester Wave™: Document Mining and Analytics Platforms,* Q2 2026, reinforcing the company's position among top vendors in document mining and analytics. With its UiPath IXP (Intelligent Xtraction and Processing) solution, part of the UiPath Platform, UiPath is helping to define the category and empower enterprises to use business orchestration and agents to extract, interpret, and process information from a wide range of document types, enabling reliable automation of document-intensive workflows at enterprise scale.

UiPath IXP combines intelligent document processing, agentic AI, orchestration, and governance capabilities to help enterprises automate complex document-centric workflows at scale. UiPath IXP automates the manual burden of extraction and interpretation of complex information leading to improved productivity and enabling teams to focus on higher-value work. Tasks that took hours can now be completed in minutes.

The report states, "UiPath earns high marks for agentic AI operations and architecture, agentic AI functionality, and agentic AI integration, delivering governed agent execution with user-reviewable plans and OpenTelemetry/OpenTelemetry Protocol (OTEL/OTLP)-compliant tracing and auditability. The vendor also scores above par for AI model orchestration, supported by hybrid pipelines that route work based on confidence/thresholds with human-in-the-loop, and robust composite-document splitting and validation feedback loops."

According to the report, "UiPath customers point to strong business value and a reliable, scalable platform. They also highlight document privacy/sovereignty and the quality of customer service as strengths for this vendor… UiPath is a good fit for organizations that want to standardize on a single agentic automation platform that combines intelligent document processing (IDP) with workflow orchestration, governance, and broad enterprise integrations."

"Documents are the connective tissue of every enterprise process, but reach their greatest value when accompanied by context, governance, and orchestration at scale," said Badri Narayanan, Senior Vice President, Software Engineering at UiPath. "To us, this recognition reflects not only the strength of our IXP, but our overall approach to pairing intelligent document processing and business orchestration. It's a true unlock for end-to-end enterprise transformation, combining AI agents, orchestration, human-in-the-loop validation, and enterprise-grade governance. The document, regardless of format or source, is no longer a bottleneck — it's the catalyst for orchestrated business transformation."

The report also mentions the UiPath acquisition of WorkFusion (which was in February 2026), noting that the acquisition “extends UiPath’s strategy with specialized AI agents for anti-money laundering (AML), know your customer (KYC), and fraud investigation, which enable more vertical solutions in banking and financial services.”
