Vuzix Introduces Z100 Smart Glasses to Seamlessly Connect Workers with AI Optimization Tools

- *Sleek, safety glasses certified, smart glasses provide an attractive, all-day wearable interface between AI enhancement applications and human workers*

ROCHESTER, N.Y., Jan. 9, 2024 /PRNewswire/ -- [Vuzix® Corporation](#) (NASDAQ: VUZI), ("Vuzix" or, the "Company"), a leading supplier of smart glasses and augmented reality (AR) technology and products, today announced the unveiling of Vuzix Z100 smart glasses, which will initially be offered as a developer's edition. Built using the Vuzix Ultralite OEM PlatformSM, these safety glasses-certified smart glasses are sleek and made for all day wear. Using them, workers get a human-centered connection to AI and work process applications, receiving critical updates, convenient workflow and task confirmations, and notifications in real time, all while wearing a pair of glasses that workers will enjoy having on.

Vuzix Z100 smart glasses pair seamlessly via Bluetooth with Android or iOS IOT devices. They represent the first attractive, functional bridge between AI platform tools, where situational guidance can streamline workflows, and human workers can reap the benefits of a truly connected workplace. In addition to a lightweight AI interface, Vuzix Z100 glasses can augment the data feed from finger scanners, sensors, controllers, and other equipment with minimal native UI, making that data available in a new and highly accessible format. Tasks with sub-standard user feedback due to device or process limitations can now have their workflows displayed in the user's heads up display, providing human-centered outputs and real-time updates.

Running up to 48 hours on a single charge, Vuzix Z100 smart glasses pack industry-defining heads-up waveguide technology into a sleek, fashionable form factor that weighs in at just 35 grams – the weight of a standard pair of glasses. Advanced monocular waveguide optics, combined with Vuzix' custom micro display engine, create a crisp, transparent, monochrome image that can deliver all the important information on a user's Android or iOS device, hands-free right before their eyes. Wearers get heads-up access to important task information, from language translation and closed captioning, to directions, to health and workout status, to messaging, workflow outputs and much more. Best of all, Vuzix Z100 smart glasses provide a sleek, attractive form factor that frontline employees will want to wear.

"The Z100 takes enterprise use of AR smart glasses to the next level, providing workers with a hands-free wearable that is indistinguishable from a pair a standard glasses," said Paul Travers, President and Chief Executive Officer at Vuzix. "This rollout is in overwhelming response to interest expressed by enterprise customers in an attractive and light weight pair of smart glasses that can augment current workflows with AI optimization software. There are customers across numerous market verticals and use cases that we believe will embrace this product as fashionable and affordable productivity device that workers will enjoy wearing all day every day."

Vuzix Z100 smart glasses will be on display at the Consumer Electronic Show (CES) taking place January 9-12, 2024 in Las Vegas, Nevada. Visit Vuzix at booth #20143.
