Viveve Named One of North America's 500 Fastest Growing Companies by Deloitte

Company awarded sixth place overall and is only medical device company listed in the top ten

ENGLEWOOD, Colo., Nov. 15, 2018 (GLOBE NEWSWIRE) -- Viveve Medical, Inc. (NASDAQ: VIVE), a medical technology company focused on women's intimate health, today announced that the company has been included in Deloitte's 2018 Technology Fast 500, a list of the 500 fastest growing technology, media, telecommunications, life sciences, and energy technology companies in North America.

"We are proud to be acknowledged as the only medical device company listed among the top ten companies named to the 2018 Technology Fast 500 list. We believe our growth is a reflection of many important factors, including expansion of our global sales operations, the strong commercial response to our patented cryogen-cooled monopolar radiofrequency (CMRF) technology platform, and the expanding focus on treatment of women's intimate health issues around the world," said Scott Durbin, chief executive officer and director of Viveve.

About Viveve

Viveve Medical, Inc. is a women's intimate health company passionately committed to advancing new solutions to improve women's overall well-being and quality of life. The internationally patented Viveve[®] System, that delivers the Viveve treatment, incorporates clinically-proven cryogen-cooled, monopolar radiofrequency (CMRF) technology to uniformly deliver volumetric heating while gently cooling surface tissue to generate robust neocollagenesis in a single in-office session.

International regulatory approvals and clearances have been received for vaginal laxity and/or improvement in sexual function indications in over 50 countries. In the second quarter of 2018, Viveve initiated VIVEVE II, a multicenter, randomized, double-blind, sham-controlled study to assess improvement of sexual function in women following childbirth following an Investigational Device Exemption (IDE) application approval from the U.S. Food and Drug Administration (FDA) in March of 2018. If successful, this trial could support a marketing application for a new U.S. commercial indication. Currently, in the United States, the Viveve System is cleared by the FDA for use in general surgical procedures for electrocoagulation and hemostasis.

Viveve has initiated LIBERATE-International, one of two planned independent, multicenter, randomized registration trials for the improvement of stress urinary incontinence in women and has submitted an IDE to the FDA for LIBERATE-U.S. The results of these two studies, if successful, could support marketing applications in the U.S. and additional countries around the world for this new commercial indication.
