## Non-IFRS Financial Measure

We have included Adjusted EBITDA because it is a key measure used by our management and board of directors to understand and evaluate our core operating performance and trends, to prepare and approve our annual budget and to develop short- and long-term operational plans. In particular, the exclusion of certain expenses in calculating Adjusted EBITDA can provide a useful measure for period-to-period comparisons of our core business. We calculate Adjusted EBITDA as net profit / loss for the period plus income taxes and social contribution plus / minus finance revenue / expense result plus depreciation and amortization plus impairments plus revaluation adjustment of contingent liabilities plus share-based compensation expenses plus bad debt provision.
