Recent Company Highlights

- The Company disclosed plans to enroll end-stage renal disease (ESRD) with endotoxemia as the first indication to be enrolled in human studies of Sigyn Therapy™, a medical technology designed to treat pathogen-associated inflammatory disorders that are not addressed with market-cleared drug agents.
- The Company introduced ChemoPrep™ and ChemoPure™, which comprise a system designed to improve chemotherapy delivery and reduce its toxicity. Current limitation of chemotherapy: Poor delivery and toxicity. Less than 3.5% of infused chemotherapy reaches its target tumor site.
- The Company introduced ImmunePrep™, a novel commercialization platform

designed to enhance the delivery of therapeutic antibodies, including cancer checkpoint inhibitors. Current limitation of therapeutic antibodies: Less than 5% of infused antibodies are delivered to their therapeutic target.

About Sigyn Therapeutics™

Sigyn Therapeutics creates therapeutic blood purification candidates to overcome clearly defined limitations in healthcare. The Company's leadership team has extensive public market and medical technology experience, which includes multiple first-in-industry achievements.

Sigyn Therapy™ is being advanced to treat pathogen-associated inflammatory disorders that are not addressed with market-cleared drug agents. Candidate treatment indications include endotoxemia, sepsis (leading cause of hospital deaths), community acquired pneumonia (a leading cause of death among infectious diseases), and emerging drug-resistant bacterial and pandemic viral threats.

The Company recently disclosed plans to initiate human studies of Sigyn Therapy™ in end-stage renal disease (ESRD) patients diagnosed with endotoxemia, a condition associated with multi-organ dysfunction and severe sepsis. In the United States, it is estimated that upwards of 50% of 550,000+ ESRD patients suffer from endotoxemia each year.

Beyond the advancement of Sigyn Therapy, the Company believes its therapeutic pipeline is among the most expansive and compelling in the extracorporeal blood purification industry.

ChemoPrep™ and ChemoPure™ comprise a system designed to improve the tumor-site saturation of chemotherapy yet reduce treatment toxicity. ImmunePrep™ is a novel commercialization platform designed to enhance the efficacy of therapeutic antibodies (including cancer checkpoint inhibitors), whose 2022 global market of \$186.6 billion (USD) is projected to reach \$566.72 billion (USD) in 2032.
