Manufacturers Can Now Quickly Produce High-Quality Master Patterns for Investment Casting Production with New 3D Printing Build Processor from Stratasys and Materialise

Up to 50% Improvement in File Processing and Printing Speeds of Complex High-Quality Patterns

New Processor Supports Faster Time to Market for Metal Cast Parts

EDEN PRAIRIE, Minn. & REHOVOT, Israel & LEUVEN, Belgium--(BUSINESS WIRE)-- In collaboration with Materialise, Stratasys Ltd. (NASDAQ: SSYS) today announced the launch of the Stratasys Neo[®] Build Processor for Investment Casting, a unique solution designed to accelerate the production of high-quality investment casting master patterns.

This press release features multimedia. View the full release here:

Manufacturers Can Now Quickly Produce High-Quality Master Patterns for Investment Casting Production with New 3D Printing Build Processor from Stratasys and Materialise (Photo: Business Wire)

This new build processor, developed for Stratasys Neo[®]450 and

Neo[®]800 stereolithography (SLA) 3D printers, offers up to 50% faster file processing and significantly enhanced print speeds, streamlining the 3D printing workflow for manufacturers and service bureaus in the aerospace and other demanding industries.

3D printing master patterns can reduce the investment casting production time from weeks to days, potentially resulting in up to 75% time savings compared to traditional methods of manufacturing, including wax mold and CNC machining. The ability to rapidly produce intricate designs that were previously unachievable with conventional techniques opens up new possibilities for innovation in part design and functionality, specifically with small-series production runs.

The Stratasys Neo Build Processor for Investment Casting is particularly beneficial for manufacturers in aerospace, automotive, and industrial sectors, where speed, precision, and cost-effectiveness are paramount. Combining Somos[®] WaterShed[®] AF resin, Neo SLA technology, and advanced Materialise software with the variable layer thickness feature, produces highly accurate 3D printed master patterns requiring minimal finishing. This streamlined process is designed to yield exceptional metal castings in record time.

“This new build processor advances our mission to provide faster, more efficient solutions for producing high-quality master patterns,” said Rani Hagag, Chief Health Care and Consumer Business Officer at Stratasys. “Partnering with Materialise exemplifies how Stratasys collaborates with industry leaders to drive innovation and help our customers achieve their most challenging production goals with greater speed and precision.”

Materialise’s NxG Build Processor is a configurable software that translates large and complex 3D design files into 3D printable instructions, optimizing the 3D printing process from start to finish.

Enhanced Capabilities

Faster File Processing and Printing Speeds: Achieve quicker turnaround times with faster processing and print speeds by offloading computational tasks to the build processor, optimizing file preparation without compromising part integrity.

Improved Workflow Integration: Streamline workflows and reduce the learning curve for new users with a processor that integrates seamlessly with Materialise’s Lattice module and Stratasys’s Titanium™ software for Neo systems, minimizing human error.

Superior Part Quality: Enhance surface finish and reduce post-processing time with advanced variable layer thickness options that produce stable, high-quality master patterns.

Customizable Build Parameters: Optimize production with customizable parameters for geometry, supports, and lattices, leading to faster scanning and improved overall productivity.

“Our collaboration with Stratasys focuses on creating seamless integrations between software and hardware to make AM adoption more effortless for our customers,” said Udo Eberlein, Vice President Materialise Software. “With the NxG Build Processor for Stratasys Neo printers, we enable a broad set of applications but also unlock new possibilities for niche applications like investment casting, where the flexibility of additive manufacturing meets the reliability of metal casting processes that have been refined over thousands of years. This collaboration helps improve processing speed and print productivity, but is about more than just advancing technology; it’s about empowering industries to push the boundaries of what they can achieve with AM.”

About Stratasys

Stratasys is leading the global shift to additive manufacturing with innovative 3D printing solutions for industries such as aerospace, automotive, consumer products and healthcare. Through smart and connected 3D printers, polymer materials, a software ecosystem, and parts on demand, Stratasys solutions deliver competitive advantages at every stage in the product value chain. The world’s leading organizations turn to Stratasys to transform product design, bring agility to manufacturing and supply chains, and improve patient care.

law, Stratasys will also include such information in its public disclosure filings.

About Materialise

Materialise incorporates more than three decades of 3D printing experience into a range of software solutions and 3D printing services that empower sustainable 3D printing applications. Our open, secure and flexible end-to-end solutions enable industrial manufacturing and mass personalization in various industries — including healthcare, automotive, aerospace, eyewear, art and design, wearables and consumer goods. Headquartered in Belgium and with branches worldwide, Materialise combines the largest group of software developers in the industry with one of the world's largest and most complete 3D printing facilities.
