March 8, 2016

Titan Pharmaceuticals to Present at 28th Annual ROTH Conference

SOUTH SAN FRANCISCO, CA -- (Marketwired) -- 03/08/16 -- Titan Pharmaceuticals, Inc. (NASDAQ: TTNP), a specialty pharmaceutical company developing proprietary therapeutics for the treatment of select chronic diseases utilizing its ProNeura™ long-term, continuous drug delivery platform, announced today that Titan President and CEO Sunil Bhonsle will present at the 28th annual ROTH Conference on Monday, March 14 at 8:30 - 9:00 a.m. PT (11:30am - noon ET) at The Ritz-Carlton in Laguna Niguel, Calif.

Mr. Bhonsle will present the ongoing product development programs and review upcoming 2016 milestones, including Probuphine for the maintenance treatment of opioid addiction, currently under review by the U.S. Food and Drug Administration with an action date of May 27. The presentation will be available as a live and archived webcast at http://wsw.com/webcast/roth30/ttnp. The replay will be available for 90 days following the live broadcast. Interested parties may also access the webcast from the Titan website at www.titanpharm.com.

About Titan Pharmaceuticals
Titan Pharmaceuticals Inc. (NASDAQ: TTNP), based in South San Francisco, CA, is a specialty pharmaceutical company developing proprietary therapeutics primarily for the treatment of serious medical disorders. The company's lead product candidate is Probuphine®, a novel and long-acting formulation of buprenorphine for the long-term maintenance treatment of opioid dependence. Probuphine employs Titan's proprietary drug delivery system ProNeura™, which is capable of delivering sustained, consistent levels of medication for three months or longer. Titan has granted North American commercial rights for Probuphine to Braeburn Pharmaceuticals. If approved, Probuphine would be the first and only commercialized treatment of opioid dependence to provide continuous, around-the-clock blood levels of buprenorphine for six months following a single procedure. The ProNeura technology has the potential to be used in developing products for treating other chronic conditions such as Parkinson's disease, where maintaining consistent blood levels of a dopamine agonist may benefit the patient and improve medical outcomes.
