Anuvu announces NuView-Alpha and NuView-Bravo as Anuvu Constellation prepares for launch

Anuvu names first two Anuvu Constellation satellites NuView-A and NuView B

LOS ANGELES, February 21, 2024 - [Anuvu](#), the leading provider of high-speed connectivity and entertainment solutions for demanding worldwide mobility markets, is today announcing the names of the first two satellites in the Anuvu Constellation, NuView-A and NuView-B.

Named to reflect Anuvu's "new view" of the mobility connectivity market, the NuView duet is a new class of High Throughput Satellite (HTS) that will form a key element in the geostationary orbit layer of the Anuvu network.

After many years as the world's largest lessor of geostationary satellite capacity, Anuvu is set to become a satellite operator with the launch of NuView-A and NuView-B in mid-2024, providing high-performance connectivity over North America and the Caribbean. The duet will deliver 50 gigabits per second of additional bandwidth for the company's global mobility network.

"Our mission at Anuvu is to provide seamless connectivity solutions to our mobility clients as they navigate the transition from connectivity today to a world of multiple orbits and frequency bands with the need for rapid and flexible service delivered over both. The launch of the Anuvu Constellation ensures we will continue to expertly provide connectivity to people on the move – whether that's on aircraft, cruise ships, commercial shipping vessels, or super yachts – through satellite capacity that is targeted and highly flexible," says Mike Pigott, EVP Connectivity, Anuvu.

"The launch of NuView-A and NuView-B forms part of our bridge to LEO strategy, enabling flexible connectivity architectures that allow clients to pivot their business model as new technology is deployed."

The satellites will have a mission life of eight to ten years and allow capacity and power to be moved and optimized in-orbit using state-of-the-art software defined radios and digital channelizers. The Anuvu Constellation will complement the company's existing connectivity infrastructure and bolster a hybrid network across orbits to deliver optimized solutions to customers.

About Anuvu

Anuvu's team of global experts provides connectivity and content for markets on the move, including airlines, cruise lines, and mission-critical maritime, energy and government services.

We connect and entertain the world's passengers, reaching any aircraft and any vessel around the globe. Our award-winning content and connectivity solutions and services are reliable, scalable, and affordable, tailored to our customers' brands and service objectives. With a flexible and agile approach, we maximize the technology available today, while optimizing for tomorrow.

Some of the most experienced professionals in the industry lead our teams and this, together with our long-standing client relationships, means we never stand still.

Anuvu. Let Innovation Move You.
