About Excision BioTherapeutics, Inc.

Excision BioTherapeutics, Inc. is a clinical-stage biotechnology company developing CRISPR-based therapies as potential cures for viral infectious diseases. Excision unites next-generation CRISPR nucleases with a novel gene editing approach and has become the first and only company in history to cure HIV with a therapeutic in an animal model. EBT-101, the company's lead program intended to cure HIV with a single IV infusion, is being evaluated in clinical trials. Excision's pipeline includes one-time potential cures for Herpes Virus, JC Virus, which causes PML, and Hepatitis B virus. The Company's foundational technologies were developed in the laboratories of Dr. Kamel Khalili at Temple University and Dr. Jennifer Doudna at the University of California, Berkeley.
