- "How Can We Change Our Early-Stage Study Design for Cancer Immunotherapies?"
Panel participation by Dr. Marc Mansour
Wednesday, June 27, 2012, 4:30 p.m. ET

About Immunovaccine

Immunovaccine Inc. applies its novel vaccine delivery platform to the development of vaccines for cancer therapy and infectious diseases. The company's DepoVax™ platform is a patented lipid delivery system that presents antigens plus adjuvant to the immune system for a prolonged period and has the potential to enhance immune responses. Immunovaccine has advanced its platform technology and proprietary cancer vaccine into Phase I human clinical trials and has demonstrated both safety and immunogenicity potential. The Company is also capitalizing on the broad potential of its delivery platform by creating new DepoVax-based vaccines through multiple development collaborations. In addition to the Company's human health vaccine strategy, it continues to capture value from animal health vaccine applications. Immunovaccine has several key partnerships in the animal health sector including an agreement with Pfizer Animal Health, which has licensed the Company's delivery technology platform to develop vaccines for livestock.
