

## **Production / QC Technician**

**Location:** Bronx, NY

**Reporting to:** Director, Drug Substance/Product External Manufacturing

### **Why This Role. Why Now.**

Radiopharmaceuticals are one of the fastest-growing and most strategically active segments in biotech and Actinium Pharmaceuticals (NYSE: ATNM) is at the forefront.

Actinium is building first-in-class targeted radiotherapies by uniquely integrating deep radiochemistry expertise with cancer biology insight. Our pipeline spans solid tumors and hematologic malignancies and includes multiple platform-level partnering opportunities across alpha-emitter therapeutics, combinations, conditioning agents, and manufacturing IP.

### **The Opportunity**

As a Production/QC Technician, you will play a critical role in the manufacturing and analytical testing of drug products.

This role will be responsible for manufacturing and analytical testing of drug products working closely with Quality Assurance, Supply Chain, and cross-functional Subject Matter Experts.

### **Key Responsibilities**

- Perform Radiochemical labeling, purification and final synthesis according to Actinium's Master Batch Record and Standard Operating Procedures (SOPs)
- Execute aseptic production and filling operations within ISO-classified cleanrooms, maintaining rigorous adherence to aseptic gowning requirements and radiation safety protocols
- Perform Ac225 and Zr89 quality control (QC) processes according to SOPs
- Assist with basic maintenance of QC equipment
- Ensure all equipment is appropriately calibrated and qualified prior to use
- Operate the QC equipment according to SOPs
- Ensure completion of applicable cGMP documentation
- Communicate with Subject Matter Experts (SME) in support of troubleshooting equipment, production, or QC issues

- Perform radiation safety duties according to Actinium’s Radiation Compliance Program and site licensing requirements
- Clean classified and non-classified areas according to SOPs
- Perform environmental monitoring of classified areas according to SOPs

### **What You Bring**

- 2-5 years of progressive experience in pharmaceutical manufacturing or QC testing
- Demonstrated success in Analytical testing such as HPLC
- Strong capabilities in MS Office Suite
- Ability to work various shifts and weekends
- Excellent ability to communicate professionally with colleagues, have excellent attention to detail be dependable and fast paced skills

### **Education**

- B.Sc. required
- Master’s degree in chemistry, engineering, or natural sciences preferred, if applicable

### **Why Actinium Pharmaceuticals**

- Exceptional scientific innovation with a differentiated technology and product platform that’s advancing next-generation therapies in oncology.
- Exciting and expanding pipeline with a clear growth trajectory, offering opportunities to contribute to meaningful, high-impact programs.
- Hands-on exposure to leadership and decision-making, with room for employees to make measurable impact and grow professionally.
