Sonoma Pharmaceuticals Introduces New and Improved Acuicyn™ Antimicrobial Eyelid and Eyelash Hygiene Solution

PETALUMA, Calif., March 27, 2018 (GLOBE NEWSWIRE) -- Sonoma Pharmaceuticals, Inc. (Nasdaq: SNOA, warrants SNOAW), a specialty pharmaceutical company that develops and markets unique and effective solutions for the treatment of dermatological conditions and advanced tissue care, today launched a new and improved Acuicyn™ Antimicrobial Eyelid and Eyelash Hygiene solution. Formulated from a patent-protected 100% hypochlorous acid (HOCl) solution, the antimicrobial Acuicyn removes encrustation and debris, helping to manage red, itchy and inflamed eyes.

Now available in customized shatter-proof containers, Acuicyn is a non-detergent-based proprietary solution of pure 100% antimicrobial hypochlorous acid. It is now available via a doctor's prescription. Safe as saline, Acuicyn doesn't sting or burn making for pain-free application.

"I've recently switched over from using Avenova to Acuicyn because Sonoma is the original U.S. medical-grade hypochlorous acid company with a wide range of products that have helped patients across many therapeutic indications around the globe," said Dr. Mary Boname OD, MS, FAAO, and president/owner at Montgomery Eye Care. "I could not be happier with the results. Not only are my patients satisfied with cleaner and clearer eyes, Acuicyn's cost is significantly less than the cost of Avenova. I was pleased with Avenova, but I'm beyond thrilled with Acuicyn!"

Acuicyn is available by prescription from U.S. optometrists and ophthalmologists. For more information visit www.acuicyn.com.

About Chronic Eyelid and Eyelash Conditions

Millions of people suffer from chronic eye conditions caused by microorganisms that take up residence on eyelids and eyelashes, resulting in myriad afflictions including dry eye, MGD, blepharitis, demodex and eye allergies.

In particular, nearly 30 million Americans suffer from chronic blepharitis, a fairly common eye condition that causes irritation and inflammation of the eyelid margin where eyelashes join the eyelid. While normally a mild condition, if not properly treated, blepharitis can worsen to the point of negatively impacting one's vision. An equal opportunity affliction, it impacts both children and adult, men and women, and people of all ethnicities. One outcome of untreated blepharitis is the onset of meibomian gland dysfunction or what is commonly called MGD dry eye. Often accompanied by discomfort and loss of optimum vision, MGD affects the quality of the tear film.

A similar affliction is dry eye syndrome, which burdens over 100 million people worldwide. As a result of natural aging and modern living, risk of this disease increases 35% for each decade after a person reaches the age of 40. As people grow older, the production of oil in the body decreases, thus reducing tear production while increasing evaporation of tears, resulting in dryness of the eyes. This is further exasperated by increased time in front of a computer screen.

Finally, the eyelash mite, also known as demodex folliculitis, is a parasite found in the hair follicles of the face, particularly in the eyelash area. When mites build up to a high level, it can cause infection as well as loss of eyelashes. The situation can worsen by not washing the face before bed. It is estimated that 50% of Americans are afflicted with the eyelash mites due to sleeping with their eye makeup on.

About Sonoma Pharmaceuticals, Inc.

Sonoma is a specialty pharmaceutical company that develops and markets unique and effective solutions for the treatment of dermatological conditions and advanced tissue care. The company's products, which are sold throughout the United States and internationally, have improved outcomes for more than five million patients globally by reducing infections, itch, pain, scarring and harmful inflammatory responses. The company's headquarters are in Petaluma, California, with manufacturing operations in the United States and Latin America. European marketing and sales are headquartered in Roermond, Netherlands.
