About Sigyn Therapeutics™

Sigyn Therapeutics is a development-stage medical technology company headquartered in San Diego, California. The Company’s therapeutic candidates are designed to overcome clearly defined limitations in healthcare. These include the ImmunePrep™ platform, ChemoPrep™, ChemoPure™, and Sigyn Therapy™.

ImmunePrep™ is a development-stage commercialization platform to enhance and extend the performance of immunotherapeutic antibodies, which account for nine of the top 15 best-selling cancer treatment drugs. ChemoPrep™ is designed to optimize the delivery of chemotherapy, the most commonly administered drug to treat cancer, while ChemoPure™ extracts off-target chemotherapy from the bloodstream to reduce patient toxicity.

Sigyn Therapy™ is a novel blood purification technology being advanced to treat pathogen-associated inflammatory disorders. To date, *in vitro* studies have demonstrated the ability of Sigyn Therapy™ to reduce the circulating prevalence of twelve different pathogen and inflammatory disease targets from human blood plasma. Based on these outcomes, candidate treatment indications include community-acquired pneumonia, endotoxemia, drug resistant viral and bacterial infections, and sepsis, the leading cause of hospital deaths in the United States. First-in-human feasibility studies of Sigyn Therapy™ plan to enroll end-stage renal disease (ESRD) patients with endotoxemia and concurrent inflammation, which are highly prevalent and associated with increased mortality in the ESRD population.
