Intel® Edison Module Offers Brillo Support at Launch

The Intel® Edison compute module is one of the first platforms to support Brillo, which Google released source code for today via an invitation program. With an easy-to-use, open source development environment, Intel Edison solutions are well suited for makers interested in quick prototyping and fast time-to-market for IoT solutions such as Brillo. Newegg will be offering a Brillo-compliant solution built upon the Intel Edison kit for Arduino. Intel expects to support Brillo on additional SoCs (system-on-chip) and IoT maker boards in the future. Read more on [Intel Developer Zone.](#)
