CNS Pharmaceuticals to Participate in Inaugural Emerging Growth Virtual Conference

HOUSTON, March 15, 2021 /PRNewswire/ --[CNS Pharmaceuticals, Inc.](#) (NASDAQ: **CNSP**) ("CNS" or the "Company"), a biopharmaceutical company specializing in the development of novel treatments for primary and metastatic cancers of the brain and central nervous system, today announced that [John Climaco, CEO](#) of CNS Pharmaceuticals will present at the inaugural Emerging Growth Virtual Conference presented by M Vest LLC and Maxim Group LLC. The conference will take place virtually on March 17th and 18th and will feature roundtable discussions with C-suite executives moderated by Maxim Research Analysts, fireside chats with live Q&A, and presentations from hundreds of issuers both domestically and internationally.

In addition to the presentation, Mr. Climaco will participate in a live glioblastoma panel discussion on Wednesday, March 17th from 9:30-10:30 am ET.

Interested parties are invited to attend the virtual conference and access exclusive content by becoming an M-Vest member and registering [HERE](#). To learn more about the event, please visit the conference website: [Emerging Growth Virtual Conference](#).

About CNS Pharmaceuticals, Inc.

CNS Pharmaceuticals is developing novel treatments for primary and metastatic cancers of the brain and central nervous system. Its lead drug candidate, Berubicin, is proposed for the treatment of glioblastoma multiforme (GBM), an aggressive and incurable form of brain cancer. CNS holds a worldwide exclusive license to the Berubicin chemical compound and has acquired all data and know-how from Reata Pharmaceuticals, Inc. related to a completed Phase 1 clinical trial with Berubicin in malignant brain tumors, which Reata conducted in 2006. In this trial the overall response rate of stable disease or better was 44%.

This 44% disease control rate was based on 11 patients (out of 25 evaluable patients) with stable disease, plus responders. One patient experienced a durable complete response and remains cancer-free as of Feb. 20, 2020. These Phase 1 results represent a limited patient sample size and, while promising, are not a guarantee that similar results will be achieved in subsequent trials. During 2021, CNS expects to commence a Phase 2 clinical trial of Berubicin for the treatment of GBM in the U.S., while a sub-licensee partner undertakes a Phase 2 trial (with extensive PK) in adults and a first-ever Phase 1 trial in pediatric GBM patients in Poland. Its second drug candidate, WP1244, is a novel DNA binding agent that has shown in preclinical studies that it is 500 times more potent than the chemotherapeutic agent daunorubicin in inhibiting tumor cell proliferation.
