• Consistent growth in free cash flow with 15%+ growth and reinvestment in accretive acquisitions
• Very healthy balance sheet – Net neutral leverage and a very balanced approach to capital allocation
Appendix

Reconciliation of GAAP and non-GAAP Financial Measures

The Company has used the non-GAAP financial measures of gross margin (excluding depreciation & amortization), adjusted EBITDA, adjusted EBITDA margin, organic revenues, free cash flow, and free cash flow conversion in this presentation. Organic revenue is calculated as revenue less acquisition revenue. Acquisition revenue is based on the trailing 12-month revenue of our acquired entities. Free cash flow is calculated as net cash provided by operating activities less capital expenditures. Free cash flow conversion is calculated as free cash flow as a percentage of net income. These measures should not be considered in isolation or as a substitute for revenues, operating income, net income, or other performance measures prepared in accordance with GAAP.

Management uses adjusted EBITDA as measures of operating performance because these measures allow the Company to compare performance consistently over various periods without regard to the impact of the property disposition gains. Management also uses organic revenues, and organic revenues by type to compare revenues over various periods excluding the impact of acquisitions. Management uses free cash flow and free cash flow conversion to demonstrate the Company's ability to maintain its asset base and generate future cash flows from operations. Management believes all of these non-GAAP financial measures are useful to provide investors with information about current trends in, and period-over-period comparisons of, the Company's results of operations.

A non-GAAP financial measure is a numerical measure of financial performance, financial position, or cash flows that either 1) excludes amounts, or is subject to adjustments that have the effect of excluding amounts, that are included in the most directly comparable measure calculated and presented in accordance with GAAP in the statement of operations, balance sheet or statement of cash flows, or 2) includes amounts, or is subject to adjustments that have the effect of including amounts, that are excluded from the most directly comparable measure so calculated and presented.

Set forth on the following pages are reconciliations of non-GAAP financial measures used in today's presentation with their most comparable GAAP measures.
