

Investor Presentation

October 2025

* All data in this presentation, including forecasts and projections, is as of August 12, 2025
(as disclosed on our second fiscal quarter 2025 conference call)

Safe Harbor Statement

This presentation contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements include, without limitation, statements regarding our future profitability and cash flows, expectations regarding our future business and statements regarding the timing, milestones, and payments related to our government contracts, and statements regarding our ability to successfully exit SensiML, and actual results may differ due to a variety of factors including: delays in the market acceptance of the Company's new products; the ability to convert design opportunities into customer revenue; our ability to replace revenue from end-of-life products; the level and timing of customer design activity; the market acceptance of our customers' products; the risk that new orders may not result in future revenue; our ability to introduce and produce new products based on advanced wafer technology on a timely basis; our ability to adequately market the low power, competitive pricing and short time-to-market of our new products; intense competition by competitors; our ability to hire and retain qualified personnel; changes in product demand or supply; general economic conditions; political events, international trade disputes, natural disasters and other business interruptions that could disrupt supply or delivery of, or demand for, the Company's products; and changes in tax rates and exposure to additional tax liabilities. These and other potential factors and uncertainties that could cause actual results to differ materially from the results contemplated or implied are described in more detail in the Company's public reports filed with the U.S. Securities and Exchange Commission (the "SEC"), including the risks discussed in the "Risk Factors" section in the Company's Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q and in the Company's prior press releases, which are available on the Company's Investor Relations website at <http://ir.quicklogic.com/>, and on the SEC website at www.sec.gov/. In addition, please note and any forward-looking statements contained herein are based on management's current expectations and assumptions that we believe to be reasonable as of this date. We are not obliged to update these statements due to latest information or future events.

Non-GAAP Financial Measures

QuickLogic reports financial information in accordance with United States Generally Accepted Accounting Principles, or U.S. GAAP, but believes that non-GAAP financial measures are helpful in evaluating its operating results and comparing its performance to comparable companies. Accordingly, the Company excludes certain charges related to stock-based compensation, in calculating non-GAAP (i) income (loss) from operations, (ii) net income (loss), (iii) net income (loss) per share, and (iv) gross margin percentage. The Company provides this non-GAAP information to enable investors to evaluate its operating results in a manner like how the Company analyzes its operating results and to provide consistency and comparability with similar companies in the Company's industry.

Management uses the non-GAAP measures, which exclude gains, losses, and other charges that are considered by management to be outside of the Company's core operating results, internally to evaluate its operating performance against results in prior periods and its operating plans and forecasts. In addition, the non-GAAP measures are used to plan for the Company's future periods and serve as a basis for the allocation of the Company's resources, management of operations and the measurement of profit-dependent cash, and equity compensation paid to employees and executive officers.

Investors should note, however, that the non-GAAP financial measures used by QuickLogic may not be the same non-GAAP financial measures and may not be calculated in the same manner as that of other companies. QuickLogic does not itself, nor does it suggest that investors should, consider such non-GAAP financial measures alone or as a substitute for financial information prepared in accordance with U.S. GAAP. A reconciliation of U.S. GAAP financial measures to non-GAAP financial measures is included in the financial statements portion of this press release. Investors are encouraged to review the related U.S. GAAP financial measures and the reconciliation of non-GAAP financial measures with their most directly comparable U.S. GAAP financial measures.

QuickLogic uses its website, the company blog, corporate Twitter account, Facebook page, and LinkedIn page as channels of distribution of information about its products, its planned financial and other announcements, its attendance at upcoming investor and industry conferences, and other matters. Such information may be deemed material information, and QuickLogic may use these channels to comply with its disclosure obligations under Regulation FD. Therefore, investors should monitor the Company's website and its social media accounts in addition to following the Company's press releases, SEC filings, public conference calls, and webcasts.

QuickLogic: Riding the Renaissance of Programmable Logic

FPGAs (Field Programmable Gate Arrays)

Semiconductor **standard products** that can be programmed to desired application or functionality requirements **after** manufacturing.

- **Extends** use cases for designs
- **Extends** life cycle for production devices
- **Uniquely** optimize for workloads / algorithms

eFPGA IP (embedded FPGA Intellectual Property)

Semiconductor IP that is included in custom ASIC designs with all the above benefits.

- **Improves** integration
- **Improves** latency
- **Lower power** than traditional FPGAs

¹ Market and Markets

- FPGA Market expected to grow at $>16.4\%^1$ CAGR from 2024 to 2029.
- Military and aerospace segment is expected to expand at the fastest CAGR over the forecast period
- ~ 3 in 4 US Military, Aerospace and Government “MAG” programs use FPGAs
- FPGAs represent $> 30\%$ of US MAG microelectronics spend

US MAG Semiconductor Spend

Delivering Complete eFPGA IP and Ruggedized FPGAs

QuickLogic Awarded a \$6.9 Million Base Contract to Develop Strategic Radiation Hardened FPGA Technology

Contract allows for Options totaling up to \$72 million over the span of multiple years

SAN JOSE, Calif., Sept. 8, 2022 /PRNewswire/ -- QuickLogic Corporation (NASDAQ: QUIK), a developer of ultra-low power multi-core voice-enabled SoCs, embedded FPGA IP (eFPGA), and Endpoint AI solutions, today announced it has been awarded a \$6.9 million Base Contract, beginning this month, to develop and demonstrate Strategic Radiation Hardened (SRH), high reliability Field Programmable Gate Array (FPGA) technology to support identified and future Department of Defense (DoD) strategic and space system requirements. The SRH FPGA Other Transactions Authority (OTA) agreement is with the Army Contracting Command – Rock Island (ACC-RI) under the authority of the Cornerstone OTA and will be based on a microelectronic fabrication process implemented at a US-owned and continental US (CONUS)-based manufacturing facility. The project is sponsored by DoD's Trusted and Assured Microelectronics (T&AM) Program, and Naval Surface Warfare Center (NSWC) Crane is the Government's technical lead.

Consumer IoT

First Programmable Logic company to actively contribute to a fully open-source suite of development tools

Fabless model provides unique combination of silicon platforms, IP cores, HW, SW, & AI SaaS solutions

⁽¹⁾ Per Company estimates

eFPGA IP Core Portfolio Expansion

- Delivered SRH FPGA design files for GlobalFoundries 12LP to target US-based defense contractors working on strategic defense systems
- Delivered 1st Design-Specific eFPGA Hard IP core optimized for Intel 18A
- Delivered customer-specific eFPGA Hard IP cores for:
 - GlobalFoundries' 12LP FinFET and 22FDX® - optimized for 5G, Aerospace and Defense, Automotive, AI/ML, and IoT markets
 - TSMC N12e™ 12nm FinFET process – optimized for commercial and industrial IoT applications on
- Collaboration with Faraday Technologies on FlashKit™ - 22RRAM SoC Development Platform

**Industry's First
UCle Enabled FPGA**

Optimized for Low Cost
& Low Power

QuickLogic YorChip

**Customizable eFPGA IP on
GlobalFoundries' 12LP Process**

- Enhanced design flexibility
- Rapid innovation
- Options for custom eFPGA

QuickLogic

Ecosystem and IP Collaborations

- Joined Intel Foundry Accelerator IP and USMAG Alliance Programs to deliver customer-definable eFPGA Hard IP cores optimized for Intel 18A
- Collaboration with Zero-Error Systems to Deliver Radiation-Tolerant eFPGA IP for Commercial Space Applications
- Collaboration with YorChip to develop UCle Enabled Chiplets for Edge IoT and AI/ML markets and joined Intel Foundry Chiplet Alliance

An Expanding Customer Base and Ecosystem

Defense

Work with all of the Top 5, and 8 of the
Top 10 DoD Prime contractors

BAE Systems' Supplier of the Year Honors

- 'Partner 2 Win' Supplier of the Year award
- "FAST Labs™ Technology Innovation Partner Of The Year" Category
- Selected from a pool of suppliers that worked to advance and deliver technology for BAE Systems' Electronic Systems sector in 2023
- Highlights relentless dedication to delivering state-of-the-art embedded FPGA Hard IP capability to the Defense Industrial Base

Secured \$Millions in eFPGA Contracts

 **australis 2.0**

 **aurora**

~\$44M+ in new contracts since July 2021 with significant upside

Pipeline includes projects on six process nodes, chiplets and storefront opportunities

Based on Australis-generated eFPGA IP

australis 2.0 eFPGA IP Generator – The Game Changer

- Proprietary, industry-leading eFPGA IP generator
 - Working with large foundries
- 
- Australis 2.0 to support advanced fabrication nodes for faster core speeds, improved silicon utilization and new features for high reliability applications
 - Fast time-to-market
 - Delivery in days/weeks vs. months/years
 - Low, cost-effective automated approach, increases capacity
 - Flexible
 - Ability to meet **your** SoC design requirements

Expanding Customer Engagements

Each new process node unlocks greater customer potential

Follow-on projects within an established node can be executed rapidly (within weeks) and with improved margins by utilizing prior development efforts and investments.

- 3 advanced process nodes added 2024
- Intel 18A Hard IP delivered Q2 '25
- 12nm capabilities led to initial contract for high-performance Data Center design

QuickLogic eFPGA IP Available on Intel 18A

**Silicon
flexibility
critical for
secure,
flexible, and
adaptable
systems**

eFPGA IP- Related Products Driving Growth

4-Year CAGR Through 2024

- ~24% Total Revenue
- ~177% eFPGA IP-Related Revenue
- Excluding RadHard contract, eFPGA revenue for 2024 would be up 8% over 2023

Note: 2023 for EOS S3 impacted by Smartphone inventory digestion.

Our Model Enables High Operating Leverage

- Operating Leverage is Non-GAAP Gross Profit \$ divided by Non-GAAP OpEx
- Demonstrated growth in Gross Profit \$ (+189%) while tightly managing OpEx (-10%)
- As more designs move to License & Royalty and/or Storefront Device shipments, Gross Profit \$ increases faster than OpEx

2025: Additional Traction and Growing Storefront Opportunities

- Investments to accelerate our Storefront Business Model and significantly expand market opportunity for high density FPGAs and strategic defense systems
- Forecasted Q4 2025 non-GAAP profitability and positive cash flow
- Growing number of foundry and advanced process technologies supported including Intel 18A
- Introduction of Australis 2.0 to support advanced fabrication nodes
- Diversification strategy showing traction, with non-SRH eFPGA revenue growth
- Large ≈\$72M Strategic Radiation Hardened contract continues to contribute while leading to new defense opportunities

Thank you!
