

First Quarter 2022 Earnings Presentation

April 27, 2022

Safe Harbor Statement

NOTE:

This presentation contains certain statements that are not historical facts and that constitute “forward-looking statements” within the meaning of the Private Securities Litigation Reform Act of 1995. Statements in this presentation addressing expectations, assumptions, beliefs, projections, estimates, future plans, strategies, and events, developments that we expect or anticipate will occur in the future, and future operating results or financial condition are forward-looking statements. Forward-looking statements in this presentation may include, but are not limited to, our views on longer-term returns, macroeconomic and industry trends, statements regarding our financial performance in future periods, future interest rates and their impact on our financial measures, our views on expected characteristics of future investment environments, inflation levels, mortgage spreads, the yield curve, prepayment rates and investment risks and trends, our future investment strategies, our future leverage levels and financing strategies and costs, the use of specific financing and hedging instruments and the future impacts of these strategies, the amount, timing or funding of future dividends, future actions by the Federal Reserve and other central banks and GSEs and the expected performance of our investments. The words “will,” “believe,” “expect,” “forecast,” “anticipate,” “intend,” “estimate,” “assume,” “project,” “plan,” “continue,” and similar expressions also identify forward-looking statements. These forward-looking statements reflect our current beliefs, assumptions and expectations based on information currently available to us, and are applicable only as of the date of this presentation. Forward-looking statements are inherently subject to risks, uncertainties, and other factors, some of which cannot be predicted or quantified and any of which could cause the Company’s actual results and timing of certain events to differ materially from those projected in or contemplated by these forward-looking statements. Not all of these risks, uncertainties and other factors are known to us. New risks and uncertainties arise over time, and it is not possible to predict those risks or uncertainties or how they may affect us. The projections, assumptions, expectations or beliefs upon which the forward-looking statements are based can also change as a result of these risks and uncertainties or other factors. If such a risk, uncertainty, or other factor materializes in future periods, our business, financial condition, liquidity and results of operations may differ materially from those expressed or implied in our forward-looking statements.

While it is not possible to identify all factors, some of the factors that may cause actual results to differ from historical results or from any results expressed or implied by our forward-looking statements, or that may cause our projections, assumptions, expectations or beliefs to change, include the risks and uncertainties referenced in our Annual Report on Form 10-K for the year ended December 31, 2021 and subsequent filings with the Securities and Exchange Commission, particularly those set forth under the caption “Risk Factors”.

Successfully Navigated Volatility

Our experienced team managed a disciplined investment approach that resulted in strong performance during the recent three-year period of high interest rate and interest spread volatility.

Track Record of Capital Preservation

- Since Q1'19, annualized total economic return was 10.0% and average book value was \$18 per share

⁽¹⁾Source: BlackRock 6.04 model prior to 03/31/2021 and BlackRock 6.1 on 3/31/2021 and after. Bankrate.com 30 year Mortgage Rate Index ILM3NAVG

Performance Highlights- 1Q 2022

(1) Equals sum of dividend declared per common share during the quarter **plus** the increase in book value per common share during the quarter **divided by** beginning book value per common share.

(2) Reconciliations for non-GAAP measures are presented on slide [34](#).

(3) Adjusted net interest spread, a non-GAAP measure, includes the impact from TBA drop income of 22 basis points and 16 basis points for the third and fourth quarters of 2021, respectively.

(4) Leverage equals the sum of (i) total liabilities **plus** (ii) amortized cost basis of TBA long positions **divided by** total shareholders' equity.

Disciplined Focus on the Long-Term

The global economy is evolving to a post-pandemic environment with rising complexities across economic, social and political factors.

- Shifting demographics, rising global debt, technology, human conflict, and climate change all remain key factors that increase the complexity of the macro-environment while also providing investment opportunities.
- The pandemic has resulted in global labor market imbalances, exposed widening gaps in skills, education, healthcare and digital access; increased cyber-risk and changed human migration flows.
- We believe these factors will impact economic trajectories for many years and require greater international cooperation to address effectively.
- We also believe government fiscal and monetary policy will continue to be a major factor in driving returns.
- High and unsustainable debt levels pose a risk to economic growth. During the pandemic, global debt has continued to rise.
- Global inflation levels are elevated, reflecting pandemic supply and demand dynamics. We expect housing and labor to drive upward pressure on inflation.
- Longer-term, global debt and demographic trends are important factors that will impact the level of interest rates.

New Market Paradigm and Historic Opportunity

We have protected book value as volatility spiked, interest rates increased and spreads widened, which we believe strengthens our ability to drive future accretive shareholder returns.

The Market Environment

- We expect higher returns in the MBS market as private capital replaces the Federal Reserve balance sheet.
- The pace and scope of monetary policy tightening is evolving, and we continue to expect significant moves in the shape of the yield curve as well as the level of yields across the curve.
- Mortgage spreads have widened 10-20 bps from year-end, and we expect spread widening in agency MBS to continue in 2022 as counter cyclical emergency measures are tapered.

Our Positioning

- Opportunistic balance sheet growth and prudent capital management are core elements of our strategy.
- In this transitional environment, liquidity, discipline, patience, and flexibility – in position and mindset – will be essential. Our low leverage positions us well to deploy capital and capture incremental cash flow.
- We believe we are well positioned to navigate the book value risk to wider spreads and the opportunity to expand our balance sheet at long-term accretive returns.
- Year-to-date book value and leverage have remained relatively unchanged while spreads have widened, illustrating the benefits of our risk management, prudent leverage and capital allocation strategies.
- We remain focused on preserving capital as the market transitions to a wider spread environment.

Investment Portfolio *(as of dates indicated)*

Disciplined capital allocation and portfolio constructed for flexibility.

March 31, 2022

December 31, 2021

Asset Type

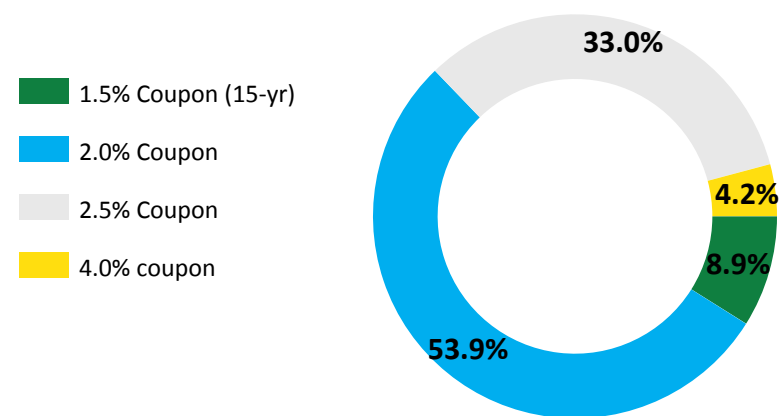

Asset Type

Agency RMBS⁽¹⁾ Coupon Breakout

Agency RMBS⁽¹⁾ Coupon Breakout

(1) Includes TBA dollar roll positions at their implied market value which are accounted for as "derivative assets (liabilities)" on our consolidated balance sheet.

Risk Position - Interest Rates

 *We have maintained a portfolio structure hedged with the long end of the yield curve.*

Parallel Curve Shift (bps)	Percentage Change in Common Shareholders' Equity	
	As of March 31, 2022	As of December 31, 2021
+100	(0.9)%	2.7%
+50	0.4%	2.6%
-50	(3.0)%	(6.1)%
-100	(8.7)%	(18.3)%

Curve Shift 2 year Treasury (bps)	Curve Shift 10 year Treasury (bps)	Percentage Change in Common Shareholders' Equity	
		As of March 31, 2022	As of December 31, 2021
+25	+50	(0.5)%	1.3%
+50	+25	0.9%	2.5%
0	-25	(0.3)%	(1.2)%
-10	-50	(1.7)%	(4.0)%
-25	-75	(5.0)%	(9.0)%

The estimated changes in the tables above incorporate duration and convexity inherent in our investment portfolio as it existed as of the dates indicated.

Source: Company models based on modeled option adjusted duration. Includes changes in market value of our investments and derivative instruments, including TBA securities, but excludes changes in market value of our financings because they are not carried at fair value on our balance sheet. Percentage changes do not reflect any potential changes in market credit spreads.

Risk Position - Credit Spreads

The estimated percentage change in these values incorporates portfolio and hedge characteristics as they existed at the dates indicated.

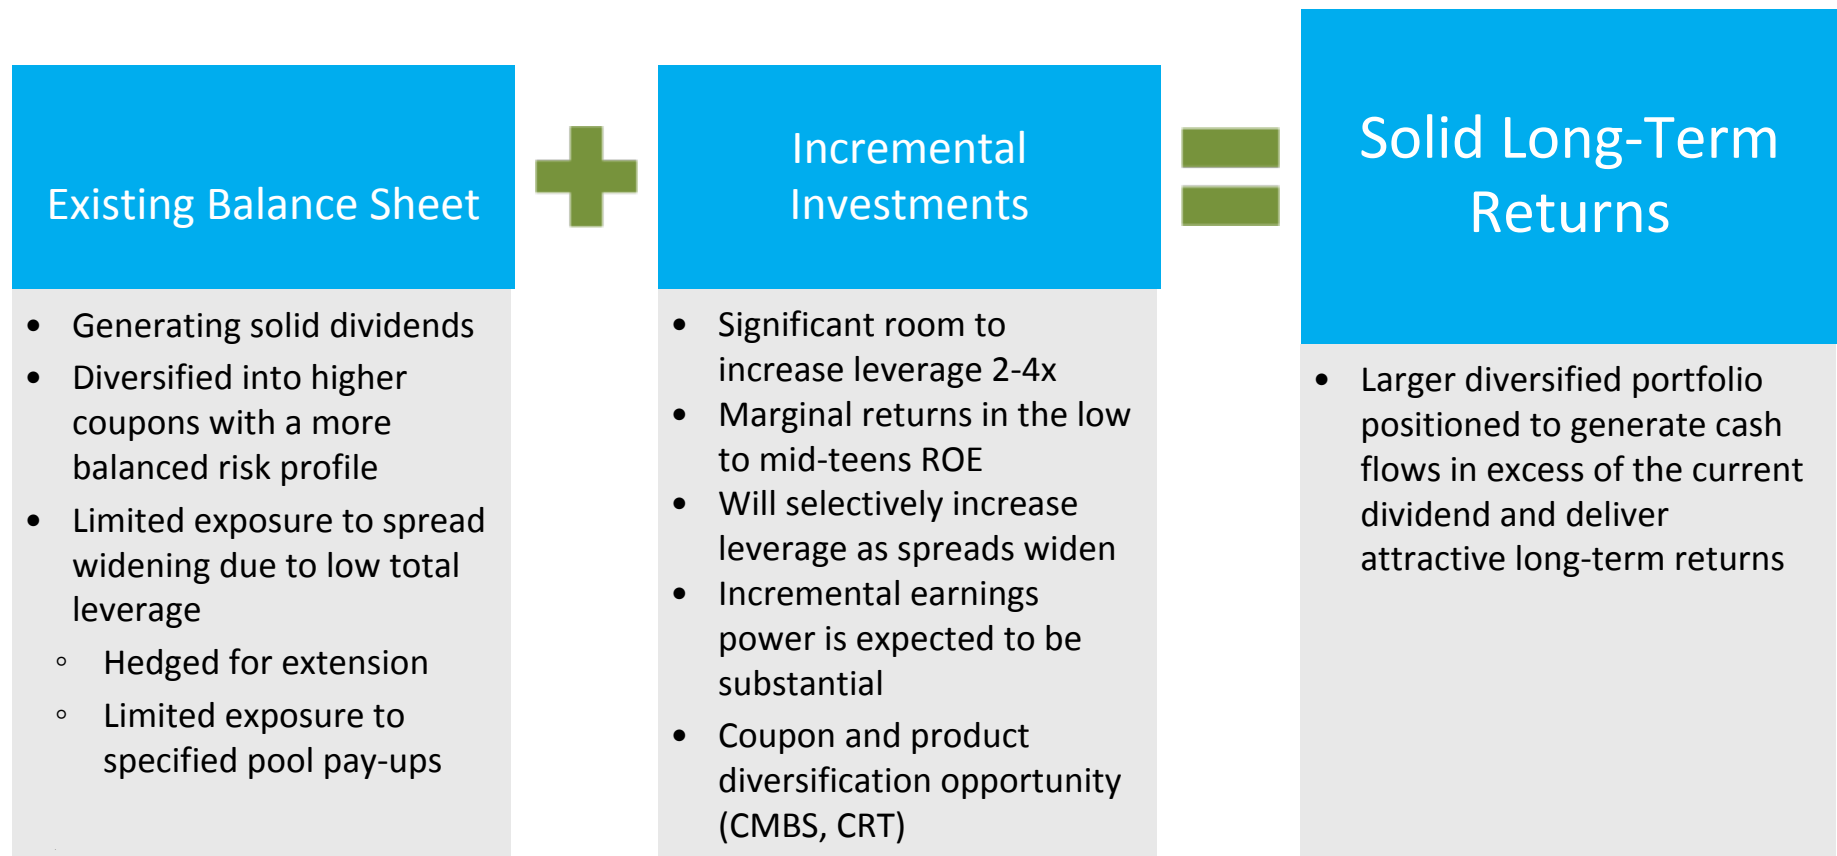

Change in Market Credit Spreads (bps)	Percentage Change in Common Shareholders' Equity	
	As of March 31, 2022	As of December 31, 2021
+20/+50 ⁽¹⁾	(10.0)%	(9.2)%
+10	(4.8)%	(4.4)%
-10	4.8%	4.4%
-20/-50 ⁽¹⁾	10.0%	9.2%

(1) Incorporates a 20-basis point shift in Agency and non-Agency RMBS/CMBS and a 50-basis point shift in CMBS IO.

Source: Company models based on modeled option adjusted duration. Includes changes in market value of our investments and derivative instruments, including TBA securities, but excludes changes in market value of our financings because they are not carried at fair value on our balance sheet.

Well-Positioned for a Favorable Investment Environment

Historic investment opportunity in Agency RMBS as the largest non-economic buyer exits. We believe our book value preservation and low leverage put us in excellent position to capitalize on this opportunity.

Long-Term Industry Trends

Positive long-term fundamental trends support Dynex's business model.

1

Favorable investment environment and demand for yield

- U.S. demographic trends will drive demand for housing and yield
- We believe we are entering a period of sustainable marginal returns in the low to mid-teens ROE

2

Further expansion of returns as counter cyclical emergency measures are tapered

- Need for private capital to replace government balance sheets
- Higher returns as Federal Reserve reduces its footprint over the long-term

3

Focus on Corporate Responsibility

- Experienced, ethical, and purpose-driven team
- Committed to our core values of *Stewardship, Performance, Integrity, Trust, Kindness, Equality & Inclusion, Innovation and Collaboration*

Disciplined Focus on the Long-Term

Dynex Capital has generated long-term returns exceeding the S&P 500 Financials and comparable to the Russell 2000 Value indices.

Source: S&P Capital IQ
Assumes reinvestment of dividends

Key Takeaways

- Generated 3.5% Total Economic Return during the largest quarterly increase in yields across the curve since 1980 and the largest increase in mortgage rates since 1985.
- We have protected book value as volatility spiked, interest rates increased and spreads widened, which strengthens our ability to drive future accretive shareholder return.
- As of March 31, 2022, we had over \$500m of liquidity and our leverage was at 6.1x, which limits risk to our book value and adds the flexibility to swiftly deploy capital accretively.
- We believe that markets are only beginning to price the potential impact of quantitative tightening and we are positioned to deploy capital into a prolonged period of greater return opportunities.
- The collective experience of our team, emphasis on risk management, capital preservation, disciplined asset allocation, and hedging are important factors for differentiating performance as we move through 2022.
- We continue to manage our business with a long-term view, including plans to grow our capital base and invest in people, processes, and technologies.
- Over the long-term, we are confident in our ability to generate attractive risk-adjusted returns that support our above average dividend yield.

Why Dynex

 **Industry-leader with a Compelling Long-Term Track Record of Delivering Shareholder Value**

Excellent performance record with industry-leading 3-year and 5-year total returns

Attractive dividend yield at a discounted price-to-book valuation on a high-quality, liquid balance sheet

Earnings power to drive upside with opportunistic deployment of capital

Experienced management with a track record of disciplined capital deployment through multiple economic cycles

Strong alignment of interest with shareholders due to high insider ownership and owner-operated structure

Macroeconomic environment with low funding costs supportive of generating returns and cash income

Resilient, flexible and liquid balance sheet designed to weather market volatility

Supplemental Information

Corporate Responsibility

 *At Dynex, we recognize that we have a responsibility to be stewards of the future and we are committed to excellence in our ESG practices.*

CORE VALUES

We rely on our core values to sustain our high-performance culture and to consistently generate attractive, long-term returns.

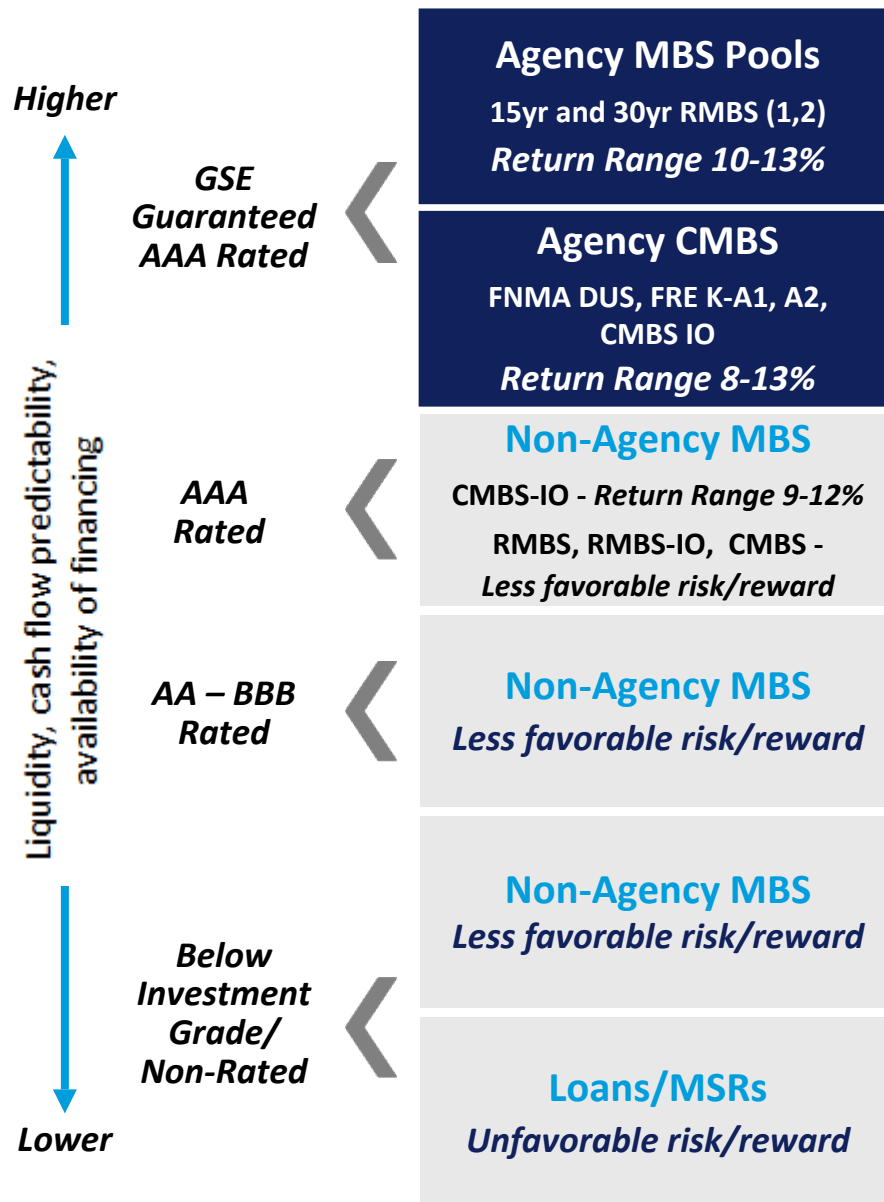

SASB

Illustrating our commitment to continual improvement in our ESG program, in 2021, we presented our inaugural disclosures under the SASB framework.

These can be found on our corporate website at [**dynexcapital.com/corporate-responsibility**](https://dynexcapital.com/corporate-responsibility).

Current Marginal Investment Returns *(as of March 31, 2022)*

Agency RMBS offer attractive returns and other asset classes are adjusting to a more favorable risk/reward.

- The most compelling levered risk and convexity adjusted marginal returns are still in the highest credit quality and the most liquid assets.
- Agency guaranteed RMBS offer attractive returns as the Fed exits.
- TBA contracts offer additional financing advantage vs. repo and increased flexibility to maneuver portfolio size.
- Investing in more liquid MBS allows us the flexibility to rapidly pivot to other opportunities when they arise.

(1) Range of levered returns based on Company assumptions and calculations
(2) Includes returns for TBA specialness and specified pools.

(1) Source: JP Morgan DataQuery, Bloomberg and internal company data. Specified Pool Payups are quoted in percentage points of price above TBAs

(2) UMBS 2.0/2.5 changes are compared from when Specified Pools in that coupon became available in the market.

Key Rate Yield Changes

Largest quarterly changes in yields on 2s, 5s since the early '80s

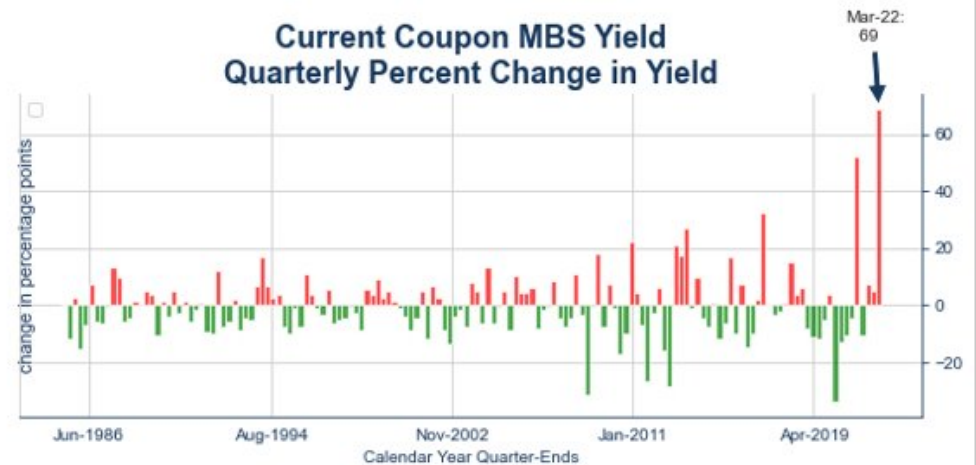

Largest quarterly change in MBS Current Coupon Yield since creation.

Key Rate Yield Percent Changes

Considering how low yields were, the moves were massive when seen on percentage change in yield terms.

Hedge Position Changes

Our hedge strategy is constructed to maximize liquidity and protect the portfolio under various rate scenarios.

- Futures offer hedge protection for higher rates with lower impact on liquidity and greater trading flexibility.

March 31, 2022				December 31, 2021		
	Notional Amount/ Long (Short) (\$ in '000s)	Rate	Average Months to Expiration	Notional Amount/ Long (Short) (\$ in '000s)	Rate	Average Months to Expiration
U.S. Treasury futures	\$ (3,940,000)	n/a		\$ (3,890,000)	n/a	3
Interest rate payer swaptions	500,000	1.60%		500,000	1.60%	7

Funding Strategy *(as of March 31, 2022)*

(\$s in thousands)

Collateral Type	Balance	Weighted Average Rate	Fair Value of Collateral
Agency RMBS	\$2,547,808	0.26 %	\$2,688,612
Agency CMBS	168,173	0.25 %	171,364
Agency CMBS IO	164,273	0.75 %	174,532
Non-Agency CMBS IO	72,548	1.33 %	85,160
Total	\$ 2,952,802	0.31 %	\$3,119,668

- Weighted average repo rate for the first quarter of 2022 was 0.25%, an increase of 4 bps from the fourth quarter 2021. The weighted average rate on repo outstanding as of March 31, 2022 was 0.31%.
- Active with 22 counterparties at March 31, 2022.
- Maximum equity at risk with any one counterparty is less than 5%.

Remaining Term to Maturity	Balance	Percentage	Weighted Average Original Term to Maturity
< 30 days	\$1,567,265	53%	88
30 to 90 days	977,241	33%	154
91 to 180 days	159,180	5%	367
181 to 365 days	249,116	8%	365
Total	\$2,952,802	100%	148

Dollar Rolls

- TBAs are an important part of Dynex's actively managed Agency RMBS strategy. We use TBAs to quickly add or remove earning assets as they are among the most liquid tradeable instruments in the fixed income markets, even more than specified pools.
- Dollar rolls are the financing mechanism for TBA positions and can provide the additional benefit of lower implied financing rates ("trading special") compared to traditional repo financing.
- Implied financing levels in the TBA market are driven by prepayment expectations and supply/demand dynamics by coupon and can be "special" (i.e. below the level of repo rates for substantial periods of time).
- Dynamic management of pools and TBA positions allows us to capture incremental return versus purely owning Agency RMBS pools.
- TBA positions are hedged using similar instruments as Agency RMBS pools with varying duration estimates.
- Federal Reserve purchase activity and investor demand for Agency RMBS have caused implied financing rates from dollar rolls in "production" coupons to remain favorable versus repo rates.

Long-term Investment Strategy

Dynamic and disciplined capital allocation model enables us to capture long-term value

- In the current environment invest in a high quality, liquid asset portfolio of primarily Agency investments
- Longer-term diversification is key
 - Balance between commercial and residential sectors provides diversified cash flow and prepayment profile
 - Agency CMBS protect the portfolio from extension risk. High quality CMBS IO add yield and are intended to limit credit exposure and prepayment volatility vs. lower rated tranches
 - Agency fixed rate RMBS allow opportunistic balance sheet growth in high quality liquid assets
- Flexible portfolio duration position to reflect changing market conditions

High concentration Low concentration No concentration

Portfolio Characteristics *(as of March 31, 2022)*

Total	\$ 3,084,066	\$ 1,770,000	\$ 4,854,066	\$ 4,947,670	100 %	-	\$ 341,874	-	2.11 %

(1) The weighted average coupon is the gross interest rate of the security weighted by the outstanding principal balance (or by notional amount for CMBS IO).

(2) Amortized cost %, unamortized premium balance, 3-month CPR and WAVG yield exclude TBA securities.

(3) 3-month CPRs exclude recent purchases of securities which do not have a prepayment history.

(4) CMBS IO do not have underlying par values. The total notional value underlying CMBS IO was \$18.2 billion as of March 31, 2022.

(5) Structurally, we are compensated for CMBS prepayments except under certain circumstances.

Prepayment Protection on Unamortized Premium

(as of March 31, 2022)

Investment Premium by Asset Type (\$ in millions)

Unamortized Premium		\$ in Millions	% of Total
Explicit prepayment protection:	CMBS/CMBS IO	\$276.5	81%
Favorable prepayment characteristics:	RMBS	65.6	19%

Performance Statistics Overview

(1) Amount represents realized and unrealized gains and losses on the Company's MBS and loans.

(2) Amount represents realized and unrealized gains and losses on derivatives including TBAs except for TBA drop income.

Mortgage REIT Business Model

MREIT Glossary of Terms

Commercial Mortgage-Backed Securities (CMBS) are a type of mortgage-backed security that is secured by the mortgage on a commercial property. CMBS can be Agency issued and issued by a private enterprise (non-Agency).

Credit Risk is the risk of loss of principal or interest stemming from a borrower's failure to repay a loan.

Curve Twist Terms:

Bull Flatten: Is a rate environment in which long-term interest rates are declining faster than short-term interest rates.

Bear Flatten: Is a yield-rate environment in which short-term interest rates are rising faster rate than long-term interest rates.

Bear Steepener: Is a rate environment in which long-term interest rates are rising faster than short-term interest rates.

Bull Steepener: Is a rate environment in which short-term interest rates are declining faster than long-term interest rates.

Duration is a measure of the sensitivity of the price of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years.

Duration Drift is a measure of the change in duration for a change in interest rates.

Interest Only Securities (IOs) are securities backed by a portion of the excess interest of a securitization and sold individually from the principal component.

Interest Rate Risk is the risk that an investment's value will change due to a change in the absolute level of interest rates, the shape of the yield curve or in any other interest rate relationship. Interest rate risk can also manifest itself through the purchase of fixed rate instruments funded with floating rate, or very short maturity, instruments.

Leverage is the use of borrowed money to finance assets including TBA dollar rolls.

Prepayment Risk is the risk associated with the early unscheduled return of principal.

MREIT Glossary of Terms

Repurchase Agreements are a short-term borrowing that uses loans or securities as collateral. The lender advances only a portion of the value of the asset (the advance rate). The inverse of the advance rate is the equity contribution of the borrower (the haircut).

Residential Mortgage-Backed Securities (RMBS) are a type of mortgage-backed debt obligation whose cash flows come from residential debt, such as mortgages, home-equity loans and subprime mortgages. Each security is typically backed by a pool of mortgage loans created by US government agencies, banks, or other financial institutions. RMBS can be Agency issued or issued by a private enterprise (non-Agency).

Specified Mortgage Backed Securities Pools are pools created with loans that have similar characteristics, or “stories.”

Spread Risk is the potential price volatility resulting from the expansion and contraction of the security’s risk premium over a benchmark (or risk-free) interest rate.

TBA Dollar Roll is a financing mechanism for long positions in TBAs whereby an investor enters into an offsetting short position and simultaneously enters into an identical TBA with a later settlement date.

To Be Announced (TBA) Securities are forward contracts involving the purchase or sale of non-specified Agency RMBS or CMBS.

Whipsaw describes the movement of a security when, at a particular time, the security's price is moving in one direction, but then quickly pivots to move in the opposite direction.

Sound Strategy. Unique Advantages.
