# Arkose Launches Its New Business Strategy Embracing Digital Asset Mining

**KATY, TX / ACCESSWIRE / October 26, 2021** /Arkose Energy Corp. has completed its migration from limited information to the OTC current information standard under the alternative standards as set by OTC Markets. This step creates a platform allowing the company to pursue its strategy of specialized energy production in support of the Bitcoin proof-of-work (PoW) network. The company has successfully completed its pilot project of utilizing its current natural gas production to mine bitcoin as a fully integrated process.

Arkose is continuing to develop efficient processes of identifying and converting natural gas to electricity with decentralized assets across an array of opportunities. These opportunities include converting its own production, partnering with other energy producers, and technically assisting in capturing waste energy such as flare gas. By taking each opportunity as a case-by-case project, the company believes it has identified ways to outperform other traditional digital mining companies in several areas.

According to Bo Ritz, "The energy business, outside of the financial sector, will be the industry in which blockchain has the biggest transformative and disruptive impact. The efficient use of traditional energy sources to power PoW networks eliminate the risk of reliance on traditional power grids. It additionally allows for control of the power source in a fully integrated environment from electricity generation to block creation."

Ritz adds, "Arkose is fully committed to generating the electricity to power our PoW mining operation in a sustainable and environmentally conscious way. We are currently implementing groundbreaking technology on the path to carbon neutrality. Arkose Energy Corp. is excited to be a company that will lead the way in this transformation."

## **About Arkose Energy, Corp.**

*Arkose Energy Corp. has historically specialized in the production of oil and gas, with the acquisition and development of oil and gas properties primarily in the southern United States. Arkose now focuses on the intersection between energy production and cryptocurrency mining. The company is based in Katy, Texas.*

## **Forward Looking Statements**

*The information provided in this press release may include forward-looking statements within the meaning of the federal securities laws, including statements regarding the company's ability to monetize energy production for mining and to outperform other participants in the mining space. This information, therefore, is subject to certain risks and uncertainties. There can be no assurance that the actual results, business conditions, business developments, losses and contingencies and local and foreign factors will not differ materially from those suggested in the forward-looking statements as a result of various*

*factors, including market conditions, competition, advances in technology and other factors.
