Next Graphite, Inc. Plans 50 Tonne Underground Bulk Sampling Program

Sampling Program Expected to Verify High-Grade Graphitic Content in underground Graphitic Vein Lodes

NEW YORK, NY and WINDHOEK, NAMIBIA / ACCESSWIRE / May 14, 2015 / Next Graphite, Inc. (OTC Markets: GPNE) ("Next Graphite," "GPNE," or the "Company"), an exploration/development stage company in Africa's Republic of Namibia targeting the growing global graphite production industry and market demand, today announced plans to bulk sample one of the Company's graphite veins on its 125,000-acre Aukam property.

The 50-tonne bulk sampling program is planned to begin the last week of May 2015. The goal of the Company's sampling program is to infer graphitic content occurring within the former underground workings. In a former work program, the Company discovered a series of underground vein lodes on the property which appeared to be well mineralized and easily accessible. According to Company expectations, these vein lodes are anticipated to produce grades equal to leading graphite projects worldwide.

"As we continue with our near term strategy to screen, process and sell graphite in our surface mine dumps, our team is equally optimistic about the potential of high grade graphitic bearing vein lodes in the underground workings of our property," began Cliff Bream, CEO of Next Graphite, Inc. "If these grades are reproducible, they will significantly increase our output and can reduce our budgeted costs and expenses of our future mining operations," Bream concluded.

The Company has committed to continually report its progress and results on all of its sampling, testing and grading programs currently underway.

About Next Graphite, Inc.:

Next Graphite, Inc. is an exploration/development stage company targeting the growing global graphite production industry with the Company's 125,000-acre Africa-based Aukam Graphite Project. The Aukam Graphite Mine was established in 1940 in the current Republic of Namibia, produced USD$30 million of graphite at today's prices. The Graphite property is estimated to still contain a significant amount of high grade, vein type graphitic material. Global graphite demand is being driven by the development of new markets for clean and efficient energy alternatives, smart grid infrastructure and military capabilities. Next Graphite has an immediately available, surface-visible, estimated 140,000-tonne mine heaps along with competitive projected mining and processing costs. The completion of GPNE's Aukam Graphite Mine re-launch and development activities are expected to result in a multi-million dollar inward investment into Namibia commencing in 2015.
