# Carrick Therapeutics Announces First Patient Dosed in Phase 1 Clinical Trial of its Oral CDK7 Inhibitor: CT7001

DUBLIN, November 30, 2017 /PRNewswire/ --

**Carrick Therapeutics**, a biopharmaceutical company focusing on the innovative research and development of transformative oncology medicines, today announced that the first patient has been dosed in the phase 1 clinical programme of **CT7001** - an orally bio-available Cyclin-dependent Kinase 7 (CDK7) selective inhibitor, that has shown striking efficacy in multiple pre-clinical cancer models.

Elaine Sullivan, chief executive of Carrick Therapeutics, said:

**"We are excited by the potential of CT7001 to make a major difference in cancer treatment, and intend to rapidly progress CT7001 through clinical development and bring this promising new medicine to patients as quickly as possible. This is a significant achievement for Carrick to take a pre-clinical candidate to first patient dosed in less than two years."**

CDK7 inhibition has emerged as a promising strategy in a range of cancer indications. CDK7 acts as a master regulator of transcription, as well as a regulator of the cell cycle through phosphorylation of members of the CDK family. Inhibition of CDK7 suppresses the expression of key oncogenes such as c-Myc.

CT7001 was found to be effective in pre-clinical models of breast cancer, both hormone receptor positive and triple-negative, and transcriptionally driven cancers such as acute myeloid leukemia and small-cell lung cancer (SCLC). All these cancers continue to have major unmet medical need, for example, very little progress has been made for decades in the treatment of SCLC and triple-negative breast cancer (TNBC). Due to its differentiated mechanism, CT7001 is also predicted to be efficacious where resistance has developed to current therapies.

CT7001 originated from Cancer Research UK funded scientists at Imperial College London and was licensed to Carrick by the charity's Commercial Partnerships Team. Rapid subsequent preclinical development by the company's experienced research and development team has led to approval for the first-in-human phase I study. Efficacy studies are planned to start in 2018.

Carrick Therapeutics was established with an initial funding round that saw it raise \$95 million, and continues to build its portfolio through partnering. Significantly, whilst other

companies bank on a single molecule or biological mechanism, Carrick will build a portfolio that targets multiple mechanisms that drive cancer. In close partnership with a network of clinicians and scientists in internationally leading research institutes and hospitals, the business will drive its portfolio of ground-breaking cancer therapies from laboratories to the clinic. □

The funding of Carrick Therapeutics was co-led by ARCH Venture Partners and Woodford Investment Management, with participation from Cambridge Enterprise, Cambridge Innovation Capital, Evotec, GV (formerly Google Ventures), and Lightstone Ventures.

## **Carrick Therapeutics**

**Carrick Therapeutics**, is a biopharmaceutical company focusing on the innovative research and development of transformative oncology medicines. Carrick's aim is to become Europe's leading oncology biotech. The name Carrick means 'rock' in Gaelic to emphasise the strong foundation of like-minded scientists, collaborators and investors, and the vision to build a durable world-class company. Carrick has an ambitious patient focused vision to serve cancer patients around the world by the introduction of ground breaking cancer therapies that will transform the way cancer is treated.

**The company recently announced [two new appointments](#) to its board, both of whom have extensive experience of leading drug development from laboratory to clinic:**

Dr Burt Adelman, most recently Executive Vice President and Chief Medical Officer at Dyax Corp (acquired by Shire PLC) will serve as Chairman.

He is joined by new board member, Dr Clive Dix, CEO of C4X Discovery Holdings and one of the leading figures in the UK biotechnology sector.

**Elaine Sullivan, CEO of Carrick Therapeutics**, has over 25 years of international experience and has been on the senior management team of Eli Lilly and AstraZeneca. At Eli Lilly, Elaine was Vice President of Global External Research and Development, responsible for identifying, evaluating and acquiring therapeutic molecules and technologies; and creating and managing Lilly's external R&D portfolio via venture, equity and strategic partnerships.
