

Kenai, Alaska

Marathon Oil uses a Capstone C30 microturbine at one of their gas transmission sites in Kenai, Alaska. They run the microturbine with the gas that they are pumping. Previously, they were using a diesel generator which required someone to fill the generator with diesel often.

This microturbine runs at temperatures well below freezing and without any operator intervention. ■

A Capstone C30 microturbine powers this remote gas transmission site in Alaska
