Goldman Small Cap Research Publishes New Research Report on Sigyn Therapeutics Inc.

BALTIMORE, MD / ACCESSWIRE / March 4, 2021 /Goldman Small Cap Research, a stock market research firm specializing in the small cap and microcap sectors, announced today that it has published a new research report on **Sigyn Therapeutics Inc. (OTC PINK:SIGY)**. Sigyn is a development stage therapeutic technology company focused on the treatment of life-threatening inflammatory conditions that are precipitated by Cytokine Storm Syndrome (CSS) and not addressed with an approved therapy, including sepsis and COVID-19. This report carries a price target. To view the new research report, along with disclosures and disclaimers, or to download it in its entirety, please visit. <https://bit.ly/3v1Xi0T>.

Sigyn's leverages a novel blood purification technology design and its founders extensive experience in developing therapeutic devices. The Company is advancing this technology through a series of studies and trials, culminating in the filing of an IDE with the FDA later this year. The flagship platform is a candidate to prevent or mitigate Cytokine Storm Syndrome, a life-threatening immune response precipitated by a wide-range of infectious and non-infectious conditions which can lead to multiple organ failure and cause death. The annual market opportunity for a therapeutic strategy to prevent or mitigate the Cytokine Storm is in the tens of billions annually.

In the Opportunity Research report, analyst Rob Goldman discusses how the Company's unique approach and enviable leadership combine to potentially emerge as the go-to therapy to treat life-threatening inflammatory conditions that are precipitated by CSS.

Goldman commented, "In our view, Sigyn is poised to change the way acute, life-threatening inflammatory conditions induced by Cytokine Storm Syndrome are treated. Many of these conditions have no approved therapy and represent billions in market size. The primary targeted conditions include COVID-19 and sepsis, the #1 cause of deaths in hospitals worldwide. We believe the Company's sepsis opportunity is \$17B in the US alone."

"Sigyn has reported favorable in vitro results and is poised to file an IDE with the FDA later this year. The Company could be awarded Breakthrough Device designation and Emergency Use Authorizations in the coming quarters which could make Sigyn an attractive M&A target by Tier 1 medical device players," noted Goldman.

"The Company boasts enviable leadership that is second to none in this therapeutic category. The CEO has led NASDAQ-listed device companies and co-authored submissions that resulted in two FDA Breakthrough Device awards. The co-founders oversaw the development of three devices that were approved by the FDA to treat COVID-19."

"Based on Sigyn's its unique approach, and the value of upcoming milestones as Sigyn

transitions from a development stage company to a clinical stage firm, we believe that these shares could reach our price target in the next six to twelve months," concluded Goldman. "Our target is further affirmed by using a discounted potential value of revenue generated as an FDA-approved Breakthrough Device and EUA treatment for sepsis alone."
