# Tecogen's Inverde e+ Continues to Play an Important Role in Easing Grid Constraints in NYC

WALTHAM, Mass., Sept. 05, 2018 (GLOBE NEWSWIRE) -- [Tecogen Inc.](#) (NASDAQ: TGEN), a clean energy company providing ultra-efficient, clean, natural gas powered on-site power, heating and cooling equipment, is pleased to announce several InVerde e+ cogeneration sales in New York City. Six InVerde e+ cogeneration units totaling 800 kW of microgrid enabled electric generation have been ordered and are currently being installed in four different projects. The units are expected to save over \$1 million annually on energy costs and will provide backup power during any grid outages.

"The electricity demands of New York City are magnified on hot summer days when electricity use exceeds baseline generation capacity," said Abinand Rangesh, Director of Project Development for Tecogen. "Our InVerde e+ systems play an important role in easing the capacity constraints during these peak periods. Using our cloud-based monitoring system and controls we can respond to utility requests for grid support services such as demand response. We have several sites currently enrolled in these programs, which ultimately result in additional savings for our customers."

Tecogen has the largest fleet of inverter-based CHP systems in New York City with 350 GWh generated since 2008. The systems are maintained, almost exclusively, by three Tecogen service centers located in Valley Stream, NY, Westchester County, NY, and Piscataway, NJ. The close proximity of our service centers to sites, local stocking levels, and quantity of mobile technicians is essential when participating in grid response programs and ultimately reflects on Tecogen's record fleet performance capability.

"The InVerde e+ system is ideally suited for the changing needs of power generation in urban environments such as New York City," stated Benjamin Locke, Tecogen CEO. "The utility is increasingly turning to microgrid-enabled technology that can provide assistance in times of critical grid needs. We expect more utilities to require smart inverters such as our InVerde e+ system as utilities turn to distributed generation to play a bigger role in overall grid management."

All six Tecogen systems will receive state incentives that help offset overall system cost.

## About Tecogen

[Tecogen Inc.](#) designs, manufactures, sells, installs, and maintains high efficiency, ultra-clean, cogeneration products including natural gas engine-driven combined heat and power, air conditioning systems, and high-efficiency water heaters for residential, commercial, recreational and industrial use. The company is known for cost efficient, environmentally friendly and reliable products for energy.

In business for over 35 years, Tecogen has shipped more than 3,000 units, supported by an established network of engineering, sales, and service personnel across the United States.
