Greenwich LifeSciences Announces Plan to Build Out Internal Clinical Operations Team

STAFFORD, Texas, Aug. 19, 2025 (GLOBE NEWSWIRE) -- Greenwich LifeSciences, Inc. (Nasdaq: GLSI) (the "Company"), a clinical-stage biopharmaceutical company focused on its Phase III clinical trial, FLAMINGO-01, which is evaluating GLSI-100, an immunotherapy to prevent breast cancer recurrences, today announced its plan to build out its internal clinical trial management and operations team.

The Company has begun to hire its own staff to manage and operate FLAMINGO-01, while reducing its dependence on more expensive staffing from Clinical Research Organizations (CROs). The strategy to bring in key clinical functions inside the Company is expected to reduce costs over the remaining duration of the clinical trial and to increase efficiency and quality as the clinical trial continues to increase the number of enrolling sites and the number of approved participating countries.

VP Jaye Thompson commented, "Although our experience with an external CRO has been successful, the ability to reduce our costs and improve our efficiency by bringing in dedicated staff and contractors is quite appealing. Greenwich will continue to utilize select vendors to optimize our efficiency. I am thrilled with the quality of the staff that we have been able to identify and secure to help us efficiently manage the FLAMINGO-01 study."

By selecting high caliber personnel, the Company is seeking to develop the capability to conduct multiple trials simultaneously, whether it is an increase in the number of HLA-A*02 patients, the creation of pivotal treated and placebo arms for those patients who are not HLA-A*02, the pursuit of other populations and trials for GLSI-100, or the potential to develop other in-licensed drug candidates. As this buildout continues, and as the burn rate is simultaneously reduced, the Company believes it will have more options to respond to the needs of FLAMINGO-01 or to add additional pipeline indications or product lines.

CEO Snehal Patel commented, "We believe our new strategy of retaining our own clinical staff will reduce our baseline burn rate, while improving the quality of the data collected and the management and monitoring of each site in FLAMINGO-01. This internal staff is also helping us to manage our European clinical operations. In addition, if we add another GLSI-100 indication or in-license a new drug candidate, our internal clinical team built to manage a Phase III trial can more cost effectively assimilate additional studies."

About FLAMINGO-01 and GLSI-100

FLAMINGO-01 (NCT05232916) is a Phase III clinical trial designed to evaluate the safety and efficacy of GLSI-100 (GP2 + GM-CSF) in HER2 positive breast cancer patients who had

residual disease or high-risk pathologic complete response at surgery and who have completed both neoadjuvant and postoperative adjuvant trastuzumab based treatment. The trial is led by Baylor College of Medicine and currently includes US and European clinical sites from university-based hospitals and academic and cooperative networks with plans to open up to 150 sites globally. In the double-blinded arms of the Phase III trial, approximately 500 HLA-A*02 patients will be randomized to GLSI-100 or placebo, and up to 250 patients of other HLA types will be treated with GLSI-100 in a third arm. The trial has been designed to detect a hazard ratio of 0.3 in invasive breast cancer-free survival, where 28 events will be required. An interim analysis for superiority and futility will be conducted when at least half of those events, 14, have occurred. This sample size provides 80% power if the annual rate of events in placebo-treated subjects is 2.4% or greater.

For more information on FLAMINGO-01, please visit the Company's website [here](#) and [clinicaltrials.gov here](https://clinicaltrials.gov). Contact information and an interactive map of the majority of participating clinical sites can be viewed under the "Contacts and Locations" section. Please note that the interactive map is not viewable on mobile screens. Related questions and participation interest can be emailed to: flamingo-01@greenwichlifesciences.com

About Breast Cancer and HER2/neu Positivity

One in eight U.S. women will develop invasive breast cancer over her lifetime, with approximately 300,000 new breast cancer patients and 4 million breast cancer survivors. HER2 (human epidermal growth factor receptor 2) protein is a cell surface receptor protein that is expressed in a variety of common cancers, including in 75% of breast cancers at low (1+), intermediate (2+), and high (3+ or over-expressor) levels.

About Greenwich LifeSciences, Inc.

Greenwich LifeSciences is a clinical-stage biopharmaceutical company focused on the development of GP2, an immunotherapy to prevent breast cancer recurrences in patients who have previously undergone surgery. GP2 is a 9 amino acid transmembrane peptide of the HER2 protein, a cell surface receptor protein that is expressed in a variety of common cancers, including expression in 75% of breast cancers at low (1+), intermediate (2+), and high (3+ or over-expressor) levels. Greenwich LifeSciences has commenced a Phase III clinical trial, FLAMINGO-01.
