# Cellecstar Reports Financial Results for Year Ended December 31, 2020 and Provides a Corporate Update

FLORHAM PARK, N.J., March 02, 2021 (GLOBE NEWSWIRE) -- Cellecstar Biosciences, Inc. (NASDAQ: CLRB), a late-stage clinical biopharmaceutical company focused on the discovery, development and commercialization of drugs for the treatment of cancer, today announced financial results for the year ended December 31, 2020 and provided a corporate update.

## Fourth Quarter and Recent Corporate Highlights

- Received Orphan Drug Designation from the European Commission for CLR 131 in Waldenstrom's macroglobulinemia (WM) which provides certain benefits including protocol assistance, reduced EU regulatory filing fees and 10 years of European market exclusivity
- Initiated pivotal study of CLR 131 in Waldenstrom's macroglobulinemia (CLOVER-WaM)
  - Pivotal study is designed as a global, non-comparator, single arm, expansion cohort of the currently ongoing Phase 2 CLOVER-1 study of CLR 131 and is in alignment with feedback received from the U.S. Food and Drug Administration from the September 2020 guidance meeting
  - The study will enroll 50 WM patients who have failed first-line therapy, have failed to respond to a BTK inhibitor (i.e., ibrutinib) or had a suboptimal response
  - The primary endpoint of the study is response rate defined as a partial response or better (a minimum of a 50% reduction in the biological marker IgM)
- Announced Closing of \$45.0 Million Underwritten Public Offering and Concurrent Private Placement
- Announced CLR 131 demonstrated preliminary activity in inoperable brain tumors in an international open label, dose escalation Phase 1 safety study of children and adolescents with relapsed or refractory cancers, specifically high-grade gliomas, high risk neuroblastomas and select soft tissue sarcomas
  - CLR 131 was measured in brain tumors, confirming that systemic administration of CLR 131 crosses the blood brain barrier and is delivered into tumors

- Initial activity was expected to occur at doses of 60 mCi/m<sup>2</sup> and higher; disease control has been noted at lower dose levels in heavily pretreated patients with ependymomas

“2020 was an important year for Cellectar, having announced key data from our Phase 2a CLOVER-1 study; having gained clarity on our Waldenstrom’s macroglobulinemia regulatory strategy after a positive meeting with the FDA in the Fall; and having completed a successful capital raise to support our WM pivotal study to our anticipated marketing approval date,” said James Caruso, president and CEO of Cellectar. “We are fully engaged in the execution of our CLR 131 clinical programs, prioritizing the WM pivotal study, enriching our refractory multiple myeloma data sets, and advancing our pediatric study. In parallel, we continue our research to better understand the unique potential of our delivery platform and look forward to sharing additional data.”

## 2020 Financial Highlights

**Cash and Cash Equivalents:** As of December 31, 2020, the company had cash and cash equivalents of \$57.2 million compared to \$10.6 million at December 31, 2019. Cash provided by financing activities was \$60.5 million, offset by cash used in operating activities of \$13.9 million. The company believes its cash on hand is adequate to fund basic budgeted operations for at least 12 months from the filing of these financial statements.

**Research and Development Expense:** Research and development expense for the year ended December 31, 2020 was \$10.1 million, compared to \$9.0 million for the year ended December 31, 2019. The overall increase in research and development expense of approximately 13% was primarily attributable to an increase in general research and development costs resulting from increased personnel-related costs. Manufacturing and related costs decreased due to a reduction in materials production processes and related costs. Clinical and pre-clinical project costs were relatively consistent.

**General and Administrative Expense:** General and administrative expense for the year ended December 31, 2020 was \$5.1 million, compared to \$5.2 million for the year ended December 31, 2019. The decrease of approximately 1% in general and administrative costs was primarily related to a decrease in personnel and public company expenses offset by an increase in legal fees and business insurance.

**Net Loss:** The net loss attributable to common stockholders for the year ended December 31, 2020 was (\$15.1) million, or (\$0.76) per share, compared to (\$14.1) million, or (\$1.84) per share, in 2019.

## About Cellectar Biosciences, Inc.

Cellectar Biosciences is focused on the discovery, development and commercialization of drugs for the treatment of cancer. The company is developing proprietary drugs independently and through research and development collaborations. The company’s core objective is to leverage its proprietary Phospholipid Drug Conjugate™ (PDC) delivery platform to develop PDCs that specifically target cancer cells, delivering improved efficacy and better safety as a result of fewer off-target effects. The company’s PDC platform possesses the potential for the discovery and development of the next-generation of cancer-targeting treatments, and it plans to develop PDCs independently and through research and development collaborations.

The company's product pipeline includes CLR 131, a small-molecule PDC designed to provide targeted delivery of iodine-131 (radioisotope) directly to cancer cells, while limiting exposure to healthy cells unlike many traditional on-market treatment options. CLR 131, is currently being evaluated in the CLOVER-WaM Phase 2 pivotal study in patients with relapsed/refractory (r/r) Waldenstrom's macroglobulinemia, a Phase 2b study in r/r multiple myeloma patients, the CLOVER-2 Phase 1 study for a variety of pediatric cancers, one preclinical PDC chemotherapeutic program (CLR 1900) and multiple partnered PDC assets.

### **Forward-Looking Statement Disclaimer**

This news release contains forward-looking statements. You can identify these statements by our use of words such as "may," "expect," "believe," "anticipate," "intend," "could," "estimate," "continue," "plans," or their negatives or cognates. These statements are only estimates and predictions and are subject to known and unknown risks and uncertainties that may cause actual future experience and results to differ materially from the statements made. These statements are based on our current beliefs and expectations as to such future outcomes including our expectations of the impact of the COVID-19 pandemic. Drug discovery and development involve a high degree of risk. Factors that might cause such a material difference include, among others, uncertainties related to the ability to raise additional capital, uncertainties related to the disruptions at our sole source supplier of CLR 131, the ability to attract and retain partners for our technologies, the identification of lead compounds, the successful preclinical development thereof, patient enrollment and the completion of clinical studies, the FDA review process and other government regulation, our ability to maintain orphan drug designation in the United States for CLR 131, the volatile market for priority review vouchers, our pharmaceutical collaborators' ability to successfully develop and commercialize drug candidates, competition from other pharmaceutical companies, product pricing and third-party reimbursement. A complete description of risks and uncertainties related to our business is contained in our periodic reports filed with the Securities and Exchange Commission including our Form 10-K for the year ended December 31, 2019 and our Form 10-K for the year ended December 31, 2020, when filed. These forward-looking statements are made only as of the date hereof, and we disclaim any obligation to update any such forward-looking statements.
