# Cummins Launches Next Generation 6.7L Turbo Diesel Pickup Engine System for 2025 Ram Heavy Duty Trucks

## Extending 35-Year Partnership through 2030

COLUMBUS, Ind.--(BUSINESS WIRE)-- Today, alongside their partners at Ram, Cummins Inc. (NYSE: CMI) unveiled the new 2025 6.7-liter Turbo Diesel Pickup engine system for Ram Heavy Duty, their most advanced diesel pickup engine yet. As part of this, Cummins and Stellantis have extended their partnership to supply Ram Brand through 2030, paving the way for continued innovation among the most iconic Pickup brands in the business.

Cummins' 6.7-liter Turbo Diesel advanced engine system and powertrain will be offered in the recently announced 2025 Ram 2500, 3500 Heavy Duty Pickups and Ram 3500, 4500 and 5500 Chassis Cab trucks.

"We've improved the power, efficiency, serviceability and driveability of our latest 6.7L Turbo Diesel engine, making the 2025 Ram Heavy Duty lineup the most desirable yet," said Jane Beaman, Vice President – Global On-Highway and Pickup at Cummins.

The next generation of the Cummins 6.7L Turbo Diesel engine system was designed with steadfast commitment to reliability and durability, living up to the 106-year-old brand customers expect, while setting new benchmarks for performance and efficiency.

Cummins' latest offering delivers enhanced performance alongside High-Output ratings of 430 horsepower and 1,075 lb.-ft. of torque for Pickups, and 360 horsepower and 800 lb.-ft. of torque for Chassis Cab. In close collaboration with Ram and their powertrain providers, the 2025 Cummins 6.7L Turbo Diesel engine is optimized with a brand-new 8-speed transmission, providing the right combinations of power, responsiveness and driveability.

"Whether you are towing heavy loads for work or pulling your weekend camper, Cummins 6.7 Turbo Diesel is ready for any project. Our engineers have integrated critical, yet versatile, high-performance engine technologies that customers expect at lower emissions," said

Jennifer Rager,  
General Manager –  
Pickup Business.  
“We’re thrilled to  
continue our  
partnership with Ram  
Brand and introduce  
the best diesel Pickup  
engine in the  
industry.”

All 2025 Ram Heavy  
Duty truck models  
powered by Cummins  
received noticeable  
gains in acceleration  
and power, driving  
home stronger overall  
truck performance  
and towing capability.

The Ram 2500  
gained improvements  
in towing speeds and  
responsiveness, with  
faster 0-60 mph and  
quarter-mile times,  
especially when  
towing heavy loads.

These enhancements promise drivers smoother transient responses and greater confidence under towing conditions. Noise, vibration and harshness were also improved using helical valve train synchronizing gears which enable a quieter ride.

The latest power offering for Pickups and Chassis Cab from Cummins includes advanced emissions air handling that also introduces a new airflow management design. This accompanies a new high-pressure fuel delivery system that offers top feed dry service injectors and a new fuel pump. Cummins’ newest variable-geometry turbocharger for the new 6.7-liter delivers intelligent condition-based power output that is now faster and more efficient.

Cummins has also introduced new features that make it easier to service the engine system and get back on the road. Software updates can now be executed from the comfort and convenience of inside the truck. In addition, the oil filter and dual fuel filter are now thoughtfully positioned to enable serviceability from the top side of the engine, improving the ease of maintenance—resulting in faster and less complex servicing for the 2025 Cummins 6.7-liter Turbo Diesel.

Additionally, the Cummins 6.7 Turbo Diesel Pickup and Chassis Cab engine systems offer significantly improved cold-start management with the integration of advanced glow plug technology. By reducing the wait to start time, this enhancement ensures reliable vehicle

operation even in the harshest and most extreme weather conditions.

Together since 1989, Cummins and Ram set the standard for innovation, power and durability; and the two are marking more than 35 years of partnership that will continue beyond the decade. Built in Columbus, Indiana, the 6.7 Turbo Diesel has evolved from the first generation 5.9-liter, 160-horsepower to today's 6.7-liter engine up to 430 horsepower.
