Ilios Dynamics, a subsidiary of Waltham-based energy systems company Tecogen Inc. (Nasdaq: TGEN), said Thursday that it sold seven of its natural gas engine-driven heat pumps to a biomedical research facility in Florida.

The company said the pumps will be providing hot water at over twice the efficiency of the existing boiler plant.

[Steve Lafaille](#), product manager at Ilios, said he could not name the facility in Florida or name the location, but it marks a significant step for the company as it expands its products into the pharmaceutical and lab markets. The company recently installed one of its systems at a large pharmaceutical company in Ireland, Lafaille said.
