

Offshore Platform Gulf of Mexico

This offshore platform is in the Gulf of Mexico off the coast of Tampico. The platform is owned and operated by Petroleos Mexicanos (PEMEX). This site has two Capstone C30, Class I, Division 2 microturbine systems.

Capstone Turbine Corporation was the first to produce microturbine systems certified by Underwriters Laboratories (UL) for Class I, Division 2 hazardous locations. Capstone's microturbine system offers a good value proposition for offshore platforms with its small footprint and low maintenance features.

Capstone participated at the "Environmental Expo" in Monterrey, Mexico, which was a part of Governor Schwarzenegger's Mexico Trade Mission on November 8–10, 2006. High level representatives of the Monterrey government, private companies, and Governor Schwarzenegger attended the expo. ■

Two Capstone C30, Class I, Division 2 microturbines power this offshore platform in the Gulf of Mexico.
