# Redwire Awarded Contract to Deliver Quantum-Secure Spacecraft for European Space Agency's QKDSat

KRUIBEKE, Belgium--(BUSINESS WIRE)-- Redwire Corporation (NYSE: RDW), a global leader in space and defence technology solutions, announced today that it has been awarded a contract to develop a quantum-secure satellite under the European Space Agency's (ESA) Quantum Key Distribution Satellite (QKDSat), within ESA's Advanced Research in Telecommunications Systems (ARTES) Partnership Projects program. Redwire will manufacture and deliver its European-built Hammerhead spacecraft, equipped with the QKD payload and Redwire's ADPMS-3 suite of avionics.

For QKDSat, Redwire is part of a multi-country consortium that includes Honeywell Aerospace and aims to provide quantum key distribution via satellite to safeguard against communication data breaches. Honeywell's UK team is leading an industrial consortium that includes: Redwire Space of Belgium; Craft Prospect and British Telecom of the United Kingdom; QTLabs of Austria, Honeywell's team in Canada, and several key players in Czechia and Switzerland.

"Quantum secure communications are critical to the future of European autonomy. We are proud to leverage Redwire's expertise in spacecraft development and avionics to support QKDSat," said Marc Dielissen, Executive Vice President of Redwire Europe. "Satellite quantum key distribution enables truly global, long-distance secure communication, overcoming the range limitations of terrestrial fiber-based quantum networks."

"With QKDSat, we will take a leading role in ensuring resilient and secure commercial and governmental communications across our Member States, particularly against a backdrop of ever-increasing cyber threats. We look forward to collaborating closely with Redwire and partners as we utilise their high-class expertise to deliver the future of satellite communications," said Laurent Jaffart, Director of Resilience, Navigation and Connectivity at ESA.

QKDSat leverages Redwire's expertise in state-of-the-art satellite design, development, integration, testing, and operations with Honeywell's advanced optical payload terminal to accelerate the deployment of ultra-secure communication infrastructure in space.

Redwire's facility in Belgium has more than 50 years of spaceflight heritage developing spacecraft platforms and successfully delivering innovative technology for critical ESA programs, including Proba-1, Proba-2, Proba-V, Proba-3, Σyndeo-3, and the Atmospheric Limb Tracker for Investigation of the Upcoming Stratosphere (ALTIUS) missions.

**About Redwire**

Redwire Corporation (NYSE:RDW) is an integrated aerospace and defence company focused on advanced technologies. We are building the future of aerospace infrastructure, autonomous systems, and multi-domain operations leveraging digital engineering and AI automation. Redwire's approximately 1,400 employees located throughout Europe and North America are committed to delivering innovative space and airborne platforms transforming the future of multi-domain operations. **About ESA's ARTES Partnership Projects programme**

The European Space Agency (ESA) is Europe's gateway to space, coordinating the financial and intellectual resources of its Member States to conduct space programmes and activities. The Partnership Projects programme line of ESA's Advanced Research in Telecommunications Systems (ARTES) drives innovation by federating ambitious large-scale, long-term collaborations between ESA, private companies, and satellite operators. The programme establishes ESA as a key partner in developing major satellite communication systems, new value-adding solutions and services, and providing in-orbit validation. It focuses on substantial, industry-shaping initiatives that require significant investment spanning over several years.

By closely aligning technological ambition with commercial strategy, ARTES Partnership Projects enable European and Canadian organisations to push the boundaries of satellite communications and strengthen their competitiveness on the global market.
