Taronis Provides Agenda for Upcoming Turkey Meetings

Meetings Expected to Clear Remaining Conditions for \$165 Million Contract

PHOENIX, AZ / ACCESSWIRE / September 3, 2019 /Taronis Technologies, Inc., (“Taronis” or “the Company”) (NASDAQ:TRNX), a leading clean technology company in the renewable resources and environmental conservation industry, today announced the agenda for its upcoming meetings with senior officials in Ankara, Turkey on September 10-11, 2019. The schedule includes a series of meetings with the Ministry of Treasury and Finance, the Ministry of Foreign Affairs, and the Ministry of Industry and Technology. These meetings will include cabinet level senior officials, as well as senior most members of the executive branch.

The purpose of these meetings will be first to provide a safety and environmental presentation on the benefits of MagneGas as a safer, sustainable and renewable alternative to acetylene and propylene. The Company will conduct a technology presentation for both the government and the end users of the patented Venturi plasma arc gasification unit. Taronis will also conduct a live metal cutting demonstration using MagneGas, a patented renewable metal cutting fuel product for approximately 30 of the industry leading consumers of acetylene in Turkey today.

Lastly, the Company will be meeting with key banking and finance executives to discuss an interim source of bank debt financing to fund the immediate procurement of components required for the \$165 million contract that is expected to commence in early fourth quarter 2019. The Company recently announced its intentions to lease a scalable manufacturing facility and begin hiring the requisite staffing to support high volume manufacturing of 300 KW Venturi plasma arc gasification units. Based on the timing and likelihood of the contract proceeding in the fourth quarter, the Company has requested the facilitation of these costs prior to the initial deposits on the \$165 million contract.

“We welcome the upcoming opportunity to meet with a number of extremely well respected, globally recognized leaders within the Turkish government and business community,” commented Scott Mahoney, CEO of Taronis. “We commend Turkey for recognizing the potential for our technology and products to have a positive impact on the environment, the economy, and the safety of every laborer that handles metal cutting fuel products across Turkey today.”

“For Taronis, this has the potential to be a game changing opportunity. We have been in constant dialogue over the past month, and we are confident that based on the scope and depth of our agenda, we expect to quickly clear all remaining regulatory hurdles required to commence our \$165 million contract in early fourth quarter of this year,” concluded Mr. Mahoney.

About Taronis Technologies, Inc.

Taronis Technologies, Inc. (TRNX) owns a patented plasma arc technology that enables two primary end use applications for fuel generation and water decontamination.

The Company’s fuel technology enables a wide use of hydrocarbon feedstocks to be readily converted to fossil fuel substitutes. The Company is developing a wide range of end market uses for these fuels, including replacement products for propane, compressed natural gas and liquid natural gas. The Company currently markets a proprietary metal cutting fuel that is highly competitive with acetylene. The Company distributes its proprietary metal cutting fuel through independent distributors in the US and through its wholly owned distributors doing business as “MagneGas Welding Supply”. The Company operates 22 locations across California, Texas, Louisiana, and Florida.

The Company’s technology can also be implemented for the decontamination of waste water, including sterilizing water, eradicating all pathogens. The technology is being tested to determine if it can completely eliminate pharmaceutical contaminants such as antibiotics, hormones and other soluble drugs suspended in contaminated water. Lastly, the technology process is capable of reducing or eliminating other contaminants, such as harmful metals, as well as nitrogen, phosphorus, and potassium levels that trigger toxic algae blooms. The technology has prospective commercial applications in the agricultural, pharmaceutical, and municipal waste markets. For more
