# Capstone Secures Direct Drying Project for Italian Wood Chip and Wood Flour Manufacturer

CHATSWORTH, Calif., Sept. 11, 2017 (GLOBE NEWSWIRE) -- Capstone Turbine Corporation ([www.capstoneturbine.com](http://www.capstoneturbine.com)) (Nasdaq:CPST), the world's leading clean technology manufacturer of microturbine energy systems, announced today that it received an order for a C600S microturbine to power and serve the wood drying process for a manufacturer of wood chip and wood flour for the zootechnical sector in Northeast Italy.

IBT Europe GmbH, one of Capstone's Italian distributors, secured the order, which is estimated to be commissioned in January 2018. Capstone microturbines were selected for the associated cost reductions due primarily to their ability to connect seamlessly with existing industrial process systems.

"Being the first reference in Europe of a direct exhaust application for the wood flour industry, it's a very important project for us," said Ilario Vigani, IBT Europe GmbH's Chief Executive Officer. "It plays a strategic role as a forerunner in the configuration of Capstone's oil-free natural gas microturbines in direct fumes applications used in specific industrial drying processes."

"It is always meaningful to penetrate a new niche market with your new flagship product and is particularly encouraging to see our recent upturn in project opportunities start to translate into new product orders," said Darren Jamison, Capstone's President and Chief Executive Officer.

The Capstone C600 Signature Series microturbine will be installed in a combined heat and power (CHP) configuration and operate on liquefied natural gas. In addition to powering the manufacturing facility, the direct exhaust from the microturbine will connect with the existing wood drying system, boosting overall efficiency.

"As the U.S. dollar weakens, we are seeing a noticeable improvement in the number of opportunities within the European power generation sector," said Jim Crouse, Capstone's Executive Vice President of Sales and Marketing. "With direct drying applications, in particular, businesses can achieve energy efficiency levels greater than 80 percent while simplifying the installation and maximizing return on investment," added Mr. Crouse.

## About Capstone Turbine Corporation

Capstone Turbine Corporation ([www.capstoneturbine.com](http://www.capstoneturbine.com)) (Nasdaq:CPST) is the world's leading producer of low-emission microturbine systems and was the first to market commercially viable microturbine energy products. Capstone has shipped over 9,000

Capstone Microturbine systems to customers worldwide. These award-winning systems have logged millions of documented runtime operating hours. Capstone is a member of the U.S. Environmental Protection Agency's Combined Heat and Power Partnership, which is committed to improving the efficiency of the nation's energy infrastructure and reducing emissions of pollutants and greenhouse gases. A UL-Certified ISO 9001:2015 and ISO 14001:2015 certified company; Capstone is headquartered in the Los Angeles area with sales and/or service centers in the United States, Latin America, Europe, Middle East and Asia.
