Titan Pharmaceuticals Announces FDA's Acceptance of Resubmission of New Drug Application for Probuphine

Agency Action Expected by Feb. 27, 2016 on Probuphine for Maintenance Treatment of Opioid Dependence

SOUTH SAN FRANCISCO, CA -- (Marketwired) -- 09/28/15 -- [Titan Pharmaceuticals, Inc.](#) (OTCQB: TTNP) announced today that the U.S. Food and Drug Administration has accepted for review the New Drug Application (NDA) for Probuphine®, a six-month subdermal implant containing buprenorphine hydrochloride for the long-term maintenance treatment of opioid addiction. Probuphine was developed utilizing Titan's long-term, continuous drug delivery technology, ProNeura™. The FDA has set Feb. 27, 2016 as a target date for action on the application, which was submitted by Titan's development and commercialization partner Braeburn Pharmaceuticals.

"We are pleased that the FDA has accepted for review the resubmission of the NDA for Probuphine, and will be working with the agency and Braeburn to achieve our goal of offering the first product on the market to provide maintenance treatment of opioid addiction continuously for six months following a single treatment," said Kate Beebe, PhD, Titan's executive vice president and chief development officer.

U.S. Health and Human Services (HHS) Department Secretary Sylvia Burwell recently announced that HHS will move to expand access to medication-assisted-treatment (MAT) by revising the regulations related to the prescribing of buprenorphine to treat opioid dependence. The current cap on the number of patients that can be treated with buprenorphine products by a physician limits the availability of this important medication-assisted-therapy. The HHS revision to the regulation will be developed to provide a balance between expanding the supply of buprenorphine based treatment, encouraging use of evidence-based MAT, and minimizing the risk of drug diversion.

"Opioid addiction has become a significant health epidemic, and greater access to safe and effective treatments is essential," Titan President Sunil Bhonsle said. "As federal officials seek to find a balance between increasing access and minimizing the risk of abuse and diversion, treatment options with an implant such as Probuphine could play an expanding and crucial role in the maintenance treatment of patients."

The Probuphine NDA resubmission includes results from a Phase 3 double-blind, double-dummy clinical study. The study met the pre-specified primary endpoint of non-inferiority, as well as all secondary efficacy endpoints.

About Opioid Addiction

According to recent estimates, there are 2.2 million people with opioid addiction in the U.S. Approximately 20 percent of this population is addicted to illicit opioids, such as heroin, and the other 80 percent to prescription opioids, such as oxycodone, hydrocodone, methadone, hydromorphone and codeine. Before the year 2000, medication-assisted therapies for opioid dependence had been sanctioned to a limited number of facilities in the U.S. The Drug Addiction Treatment Act of 2000 (DATA 2000) allowed medical office-based treatment of opioid dependence and greatly expanded patient access to medication-assisted treatments. Sales of buprenorphine drug products for treatment of opioid addiction in 2014 were approximately \$1.75 billion in the United States.

About Probuphine®

Probuphine is an investigational subdermal implant designed to deliver buprenorphine continuously for six months following a single treatment, and to promote patient compliance and retention. Buprenorphine, which is the active ingredient in multiple FDA-approved drug products for the treatment of opioid dependence, is currently available in tablet and film formulations that require self-administration by patients on a daily basis.

Probuphine was developed using ProNeura™, Titan's continuous drug delivery system that consists of a small, solid implant made from a mixture of ethylene-vinyl acetate (EVA) and a drug substance. The resulting construct is a solid matrix that is placed subdermally, normally in the upper arm in an outpatient office procedure, and removed in a similar manner at the end of the treatment period.

The efficacy and safety of Probuphine has previously been studied in several clinical trials, including a 163-patient, placebo-controlled study over a 24-week period (published in the *Journal of the American Medical Association* (JAMA)), and a follow on study of 287 patients (published in the journal *Addiction*).

About Titan Pharmaceuticals

Titan Pharmaceuticals Inc. (OTCQB: TTNP), based in South San Francisco, CA, is a specialty pharmaceutical company developing proprietary therapeutics primarily for the treatment of serious medical disorders. The company's lead product candidate is Probuphine®, a novel and long-acting formulation of buprenorphine for the long-term maintenance treatment of opioid dependence. Probuphine employs Titan's proprietary drug delivery system ProNeura™, which is capable of delivering sustained, consistent levels of medication for three months or longer. Titan has granted U.S. and Canadian commercial rights for Probuphine to Braeburn Pharmaceuticals. If approved, Probuphine would be the first and only commercialized treatment of opioid dependence to provide continuous, around-the-clock blood levels of buprenorphine for six months following a single procedure. The ProNeura technology has the potential to be used in developing products for treating other chronic conditions, such as Parkinson's disease, where maintaining consistent blood levels of a therapeutic agent may benefit the patient and improve medical outcomes.
