ForgeRock Simplifies the Process for Companies to Migrate from Legacy Products to a Modern Identity Solution

SAN FRANCISCO, March 11, 2020 (GLOBE NEWSWIRE) -- ForgeRock®, the leading provider in digital identity, today announced new tools to help enterprise customers quickly and easily migrate identity and access management (IAM) capabilities from legacy vendors, such as Oracle or CA Technologies, to ForgeRock's more secure and flexible platform.

The [Modernize IAM Accelerators](#) mitigate the costly and time-consuming process of moving away from legacy systems, helping to make migration seamless and invisible to users.

“Organizations often delay updating or replacing their legacy identity systems, assuming they must migrate everything at once and cause massive disruption to users and the organization,” said Peter Barker, chief product officer, ForgeRock. “However, the ForgeRock Modernize IAM Accelerators enable organizations to transition to a modern IAM environment at their own pace and avoid interrupting the user experience or causing operational impact.”

Tackling the Legacy IAM Challenge

Legacy IAM software slows digital transformation efforts. Siloed and inflexible identity solutions increase security risks and provide suboptimal user experiences while interoperability and scaling issues inflate operating costs. However, legacy IAM software can't be ripped out and replaced overnight. The risk, expense, and time required to retire these solutions and implement entirely new ones is a significant challenge for most organizations.

The Modernize IAM Accelerators Solution

The ForgeRock Modernize IAM Accelerators enable legacy IAM systems to coexist with a modern IAM platform, giving organizations the ability to migrate to ForgeRock without disruption to users. They are a pluggable, [open source framework](#) that can support multiple patterns of co-existence with and migration from most legacy IAM systems, by providing Single Sign On (SSO), Just In Time (JIT) User Migration, and Bulk User Migration. Just in Time (JIT) helps organizations save time and effort without sacrificing users' productivity, particularly when a bulk export of passwords is not possible.

Included in the Modernize IAM Accelerators are two bidirectional coexistence toolkits supporting SSO & JIT (Core and Edge), and a bulk user migration toolkit. Customers can choose the optimal toolkit (or combination of toolkits) based on their selected migration strategy.

For all three toolkits, ForgeRock has developed a pluggable framework that can be extended to specific legacy systems with included Plug Ins. Additional Plug Ins can be developed by

customers and partners since the assets are open source.

Depending on an organization's needs in modernizing IAM, these solutions can help with the success of digital transformation by reducing time and cost-intensive barriers to success.

Availability

ForgeRock Modernize IAM Accelerators are available today. See <http://www.forgerock.com/modernize-iam> for details.

About ForgeRock

ForgeRock®, the leader in digital identity, delivers modern and comprehensive Identity and Access Management solutions for consumers, employees and things to simply and safely access the connected world. Using ForgeRock, more than a thousand global organizations orchestrate, manage, and secure the complete lifecycle of identities from dynamic access controls, governance, APIs, and storing authoritative data – consumable in any cloud or hybrid environment. The company is privately held, and headquartered in San Francisco, California, with offices around the world.
