Capstone Green Energy's (NASDAQ: CGRN) United Kingdom Integrated Remanufacturing Facility Expands its Global Remanufacturing, Training, and Support Capabilities

VAN NUYS, CA / ACCESSWIRE / August 16, 2021 /Capstone Green Energy Corporation (www.CapstoneGreenEnergy.com) (NASDAQ:CGRN), formerly Capstone Turbine Corporation (www.capstoneturbine.com) (NASDAQ:CPST) ("Capstone" or the "Company"), announced today the completion of the grid interconnect expansion at the UK Integrated Remanufacturing Facility which allows for the building and testing of Capstone's C200 engines. Expanding the operations at the UK facility is fundamental for the long term support of Capstone's established and growing sustainable energy fleet in the EMEA (Europe, Middle East & Africa) region.

Located a short distance south of London and close to UK's major shipping infrastructure, Capstone's strategically located Gosport facility plays an increasingly important role in supporting the growth and expansion of the global microturbine fleet, as well as the rental program, which is a critical component of the Company's Energy as a Service (EaaS) business line. The construction of individual test cells and an increased grid export capacity agreement of 500kW marks a significant milestone in the UK operation's expanded capability to remanufacture C200 powerheads, in addition to remanufacturing the C200 recuperators.

From an original footprint of 3,000 square feet in 2009 to the current 19,000 square feet expanded facility, the UK operation has evolved from a warehouse for aftermarket parts and hub for field support, to a fully integrated remanufacturing facility capable of serving the EMEA region's future build requirements for Capstone's flagship C200 engines. Taking recent possession of the adjacent building also marks the start of a trade-in program for a region with a legacy fleet to upgrade to the more efficient Signature Series product. The added floor space will accommodate a state-of-the-art training suite for in classroom and hands-on training for regional Distributors fulfilling their need to reduce travel costs while staying product-current and maintaining vital coverage.

"Continuing to invest in our UK operation is critical to Capstone's key objectives to reduce and drive down freight dependency and offset manufacturing costs through our remanufacturing program. In parallel, we are improving response times for all our existing

Distributor partners and growing our Energy as a Service (EaaS) business as we expand the global rental fleet," said Darren Jamison, Capstone's President and Chief Executive Officer "By adding complex remanufacturing processes, the UK facility now mirrors the Capstone US-based testing facilities. These capabilities will accelerate Capstone's ability to provide parts and services to EMEA and improve future aftermarket margins" added Mr. Jamison.

"The ability to remanufacture in the UK has proven invaluable for the region, so executing the plan to maximize capability through engine builds and staging rental growth is the next natural step," said Tracy Chidbachian, Capstone Director of Customer Service. "Led by Jim Newbold, our Director of Global Services, the UK's highly experienced and talented team plays a vital role in Capstone's broader support plan and strategic development for the region," concluded Ms. Chidbachian.

About Capstone Green Energy

Capstone Green Energy (www.CapstoneGreenEnergy.com) (NASDAQ:CGRN) is a leading provider of customized microgrid solutions and on-site energy technology systems focused on helping customers around the globe meet their environmental, energy savings, and resiliency goals. Capstone Green Energy focuses on four key business lines. Through its Energy as a Service (EaaS) business, it offers rental solutions utilizing its microturbine energy systems and battery storage systems, comprehensive Factory Protection Plan (FPP) service contracts that guarantee life-cycle costs, as well as aftermarket parts. Energy Conversion Products are driven by the Company's industry-leading, highly efficient, low-emission, resilient microturbine energy systems offering scalable solutions in addition to a broad range of customer-tailored solutions, including hybrid energy systems and larger frame industrial turbines. The Energy Storage Products business line designs and installs microgrid storage systems creating customized solutions using a combination of battery technologies and monitoring software. Through Hydrogen Energy Solutions, Capstone Green Energy offers customers a variety of hydrogen products, including the Company's microturbine energy systems.

For customers with limited capital or short-term needs, Capstone offers rental systems; for more information, contact: rentals@CGRNenergy.com. To date, Capstone has shipped over 10,000 units to 83 countries and estimates that, in FY21, it saved customers over \$217 million in annual energy costs and approximately 397,000 tons of carbon. Total savings over the last three years are estimated at 1,115,100 tons of carbon and \$698 million in annual energy savings.
