About [Volcon, Inc](#)

Based in the Austin, Texas area, Volcon was founded as the first all-electric powersports company producing high-quality and sustainable electric vehicles for the outdoor community. Volcon electric vehicles are the future of off-roading, not only because of their environmental benefits, but also because of their near silent operation, which allows for a more immersive outdoor experience.

Volcon's 2023 vehicle roadmap includes both motorcycles and UTVs hitting the market in North America. Its first product, the innovative Grunt, has been shipping to customers since late 2021 and combines a fat-tired physique with high-torque electric power and a near-silent drive train. The Runt, which is a fun-sized version of the groundbreaking Grunt, is better suited for small statured riders, more compact properties and trails, or as a pit bike at race events, while still delivering robust off-road capabilities. The Brat is Volcon's first foray into the wildly popular eBike market for both on road and off-road riding and is currently being delivered to dealers across North America. Volcon is also launching and currently delivering the Volcon youth line of dirt bikes for younger riders between the ages of 4 to 11. Volcon recently launched the Stag and entered the rapidly expanding UTV market with a major announcement that all Volcon four wheeled vehicles will be powered by General Motors' electric propulsion systems, starting with the Stag. The Stag empowers the driver to explore the outdoors in a new and unique way that gas-powered UTVs cannot. The Stag offers the same thrilling performance of a standard UTV without the noise (or pollution), allowing the driver to explore the outdoors with all their senses.
