### **Recent Company Highlights:**

- Propanc completed the low dose group for its GLP-Compliant 28-day repeat-dose toxicity study for its lead product, PRP. No treatment related effects were observed in the animals in this study.
- Propanc received a notification of allowance for its lead patent application from the U.S. Patent Office. The patent application provides broad coverage for a method of treating a solid tumor through administering a pharmaceutical composition comprising a therapeutically effective amount of trypsinogen and chymotrypsinogen to patients.

### **About Propanc:**

Propanc is developing new cancer treatments for patients suffering from pancreatic, ovarian and colorectal cancers. We have developed a formulation of anti-cancer compounds, which exert a number of effects designed to control or prevent tumors from recurring and spreading throughout the body. Our products involve or employ pancreatic proenzymes, which are inactive precursors of enzymes. In the near term, we intend to target patients with limited remaining therapeutic options for the treatment of solid tumors. In future, we intend to develop our lead product to treat (i) early stage cancer and (ii) pre-cancerous diseases and (iii) as a preventative measure for patients at risk of developing cancer based on genetic screening.
